

Trading Calls

LUPIN Long/Buy 14th January 2019

After the correction from the high of 986, this counter appears to be stabilizing around 800 levels and positioning itself for rally. Sustainability above Double bottom breakout on weekly chart indicate strength in the prices. Positive crossover in daily MACD is showing upside momentum. The RSI is sustaining around 50 from a bottoming formation which is bullish. Once it manages to push itself above 945, the move on upside can be swift. Hence, positional traders are advised to go long with a stop 785 for the target of 920 and 970 marks.

SBIN Long/Buy 14th January 2019

The stock has given breakout from a consolidation phase at around 287-300 zone for quite some time forming cup & handle pattern where it consolidated again and currently has been trading as symmetrical triangle as a mother pattern on weekly chart which breakout is expected above 307 levels where buying momentum will pick with greater pace. Indicators and oscillators also lending support to its price action. We recommend a buy in this stock for an upside target of 330 and 345 marks keeping a stop loss of 274 marks.

HDFCLIFE Long/Buy 10th January 2019

The stock has corrected from the peak of 548 and currently it has shown signs of bottoming out around 379 levels. Formation of CUP & HANDLE on weekly chart showing positive move on up side. Long bullish candle near demand zone on weekly chart along with trendline breakout showing the possibility of bounce back further on upside. Moreover, MACD line crosses signal line in negative territory which is also indicating bullishness. With decent volume participation witnessed, we recommend a buy in this scrip around 400-404 and on dip towards 380-385 with stop loss of 364 for an upside target of 450 and 490 levels.

AXISBANK Long/Buy 8th January 2019

Scrip seems bottoming out after hitting the low of 580 and gave a sharp pullback on upside. It gave breakout from inverted Head and Shoulder pattern on upside which is showing strength. Emergence of Bullish belt hold along with Bullish engulfing suggest reversal on cards. Strong support is seen in the zone of 580-575 as it is the zone of 50% and 61.8% retracement of the upside move from the low 534 to the high of 638 levels. Accelerated volume with decent breakout is conducive for the prices. One can go long in the scrip near the levels of 625-632 and on the dip towards 605-610 with stop loss of 580 for the target of 675 and 690 levels.

QUESS Long/Buy 4th January 2019

Quess Corp Ltd. Has given a bullish breakout above its immediate crucial resistance of 50 DMA (710) and thereafter it is maintaining above this level since last couple of trading days. In the weekly chart the stock has made a ' Bullish- Engulfing' pattern after long downtrend. Therefore some sharp pullback rally is expected in the stock from the current level.

Market	Value	% Change
SGX Nifty (at 8.15 am IST)	10824.00	0.51%

Nifty Key Levels

Support	S1: 10700	S2 : 10650
Resistance	R1 : 10810	R2 : 10850

Market Outlook

Indices end lower after minor gain in the last hours of session and closed tad above 50 DMA. From last few days, Nifty has been forming lower highs and lower lows indicate rangebound movement will remain intact until it negates this formation. Next round of selling can come below the level of 10700 then it can drag down till 10650 levels. Upside resistance is seen at 10810 followed by 10850 levels.

VIEW

Domestic market started on a muted note at the beginning of Q3 earning result. Although positive trade talks between US & China and dovish comment on interest rate by Fed chief Powell along with robust US job data helped Indices to sustain above key support levels. Lack of follow thru buying or selling forced indices to trade in the sideways range and market is waiting for the trigger to trade in either of direction. We continue to remain cautiously optimistic on indian market in the near term. The focus of investors would shift to Q3 earning results including Reliance & Wipro and macro data (CPI & WPI) which are likely to dictate market trends. Further, Investors would also take cues from the movement of rupee and crude oil prices as it would further induce volatility in the domestic market. We would suggest investors to stay focussed on selective blue chip companies, while traders should strictly hedge their leveraged positions.

NIFTY-

- a) Last week, Nifty gyrated in the range of 10730 -10870 with alternate bouts of buying and selling pressure
- b) This is due to range of **expansion and contraction** from last few weeks which has taken the form of **DIAMOND PATTERN** in Nifty which suggest 750 point of movements on either of side
- c) Emergence of an **INSIDE PATTERN** on weekly chart imply indecisiveness and narrow range
- d) A directionless and thin breadth restrained upside as the range for an Index broadly on a higher side remains between 10900 and 10700 while with inside range of 10750 and 10850 levels.
- e) This is the pure compression in the form of volatility which suggest a move is round the corner
- f) Intersection of MACD & SIGNAL LINE suggest range bound move with positive bias in coming sessions.
- g) For any decisive move to occur, Nifty will have to surpass 100 DMA along with the peak of Diamond pattern which comes at 10930-10985 zone as they are likely to act as major resistance zones going ahead
- h) With the market trading in the same range, try to escape from the short as there is no breakdown is seen on chart yet.
- i) Strong support lies ahead at the levels of 10625 followed by 10530 levels.

VIEW

Last week Bank Nifty started to trade with a green session and then rose to make a weekly high of 27554.45 on Wednesday. However it was unable to maintain at the higher level and some profit booking was witnessed on last two trading sessions of the week. At the end of the week Banknifty closed with a net gain of 0.8% over its previous week's close.

OBSERVATIONS:

- 1) Bank Nifty is moving in a rising channel since last October 2018.
- 2) Bank Nifty is currently trading above 50, 100 & 200 DMAs
- 3) A 'Hanging man' pattern was formed on daily candlestick chart.

According to the above observations it can be concluded that the short term trend of Bank Nifty is positive. However, as the index is trading in a rising channe , it would be prudent strategy to initiate fresh long position near the lower band of the chanel and book the profit near the upper band of the channel. Therefore we recommend initiating fresh long position in Banknifty in 26700-26900 zone.

CHART ANALYSIS

Close	27454
Support 1	26907
Support 2	26596

VIEW

Against our expectation, USDINR pair bounced back after breaching our mentioned support of 69.55 mark. It is due to the hike in crude oil prices which surged higher more than 20% since hitting an almost two year low in december. Brightening prospects for US-CHINA trade talks was another reason for pushing the gauge above \$60 a barrel. But for an indian rupee hope is still alive due to weakening of Dollar index as it was not able to capitalize gains in spite of having strong employment data. On the domestic front, market participants will look over inflation data and any lower-than-expected number could restrict any major fall in the currency.

TECHNICAL FACTORS-

- a) Although positive divergence in RSI & MACD and sustainability above 21 DMA are giving room for moving higher
- b) But it has to face major resistance near 71.36 levels which is looking difficult to break in coming week.
- c) On sustaining below 70.30, it can extend down till 69.76 and 69.25 marks.
- d) In case, if it sustains above 71.36 then pair can surge higher till 72.05 and 72.65 mark

Technical Chart

STDC BUY QUESS @ 710-730 & 675-690 SL-628 (CLOSING BASIS) TGT-804,880

Quess Corp Ltd. Has given a bullish breakout above its immediate crucial resistance of 50 DMA (710) and thereafter it is maintaining above this level since last couple of trading days. In the weekly chart the stock has made a 'Bullish- Engulfing' pattern after long downtrend. Therefore some sharp pullback rally is expected in the stock from the current level.

LME Aluminium prices have fallen towards two year low at \$1920 per tonne after the supply tightness eased in the raw material sector and after United States decided to delay the sanctions on Russia, one of the world's largest producer of the metal. Prices have moved below its cost of production in China pressurizing the margins of the producers.

Globally, aluminium production has remained flat as the major producers like China is unable to increase the output as the current prices are unprofitable. While, US on the other side is starting to start its smelters but the outages at Canada, Brazil have offset the rise in production. China contributes almost 56% to the global production. And saying if China slows down its production rate, the world would be in huge shortfall in the coming year.

China Supply Concerns:

China's aluminium production has been falling since last three months despite of no winter output curtailments in place. China's capacity growth rate is slowing as old capacity is been shut down by the local government following strict targets set by China and the rate of new smelter capacity is falling. Although, the key ingredient, bauxite is restricted to produce during winter period on China's environmental crackdown.

Aluminum Corp of China Ltd also known as Chalco, China's largest producer, is cutting output on some of its aluminum production lines in northern China. The company is set to reduce some 470,000 tonnes of production, nearly 12% of company's output. Two smelters in Qinghai province of China of 270,000 tonnes capacity have gone off line in the last couple of weeks. These cuts have been inculcated as prices are trading below cost of production driven by reducing demand and ample of supply, forcing smelters to either partially or fully shut down its production.

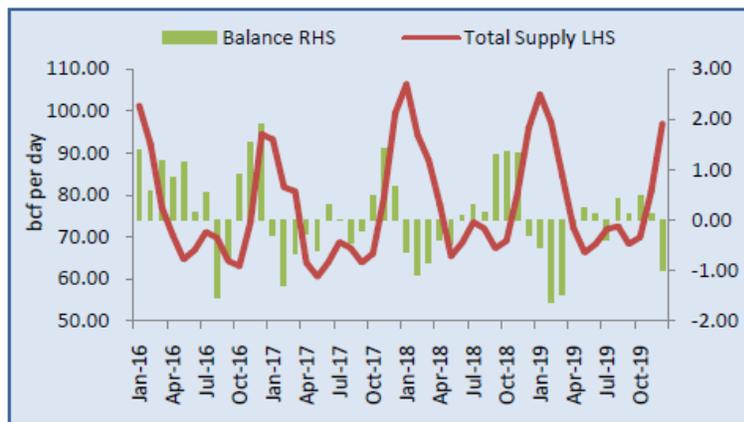

US Sanctions Tensions

US sanctions on Russia will continue add upside volatility in global aluminium prices. The U.S. Treasury Department last month postponed a Dec. 12 deadline for Deripaska to reduce his holdings in the companies, giving the Russian tycoon until Jan. 7.

Outlook

Overall, aluminium prices have declined drastically fell by almost 20% since April 2018 on extension of US sanction on Rusal and easeness in raw material supply. But we believe still some tightness in alumina market persists, as the Alunorte refinery is partially shut. Furthermore, Chinese production is expected to come down on smelters shutdown due to lower prices. However, demand weakness due to trade duties can provide some selling pressure. but prices will remain supported at lower levels. We expect MCX Aluminium prices will take support of 127-125 levels and move higher towards Rs 150-155 per kg in the short term.

Demand Supply Scenario:

Source: Narnolia Research, U.S. EIA

US Natural gas market normally shifts into deficit during the November to February period i.e. winter season in US. During this high period of demand, natural gas should be well-supplied or else supply tightness worry will emerge and prices will start to rally higher.

US Dry gas production

US Dry natural gas production is rising this year and is estimated to be at 82.2 bcf per day in August, up by 0.7 bcf/day in July, almost 7.4 bcf per day higher than last year. In 2018, US Dry gas production has increased by almost 10% on an average as compared to last year. Furthermore, EIA expects the dry natural gas production to keep rising on an average of 84.7 bcf per day in the coming year. Due to significant natural gas production increase in 2018, NYMEX natural gas prices have been unable to breach \$3 per MMBtu for the most of the summer.

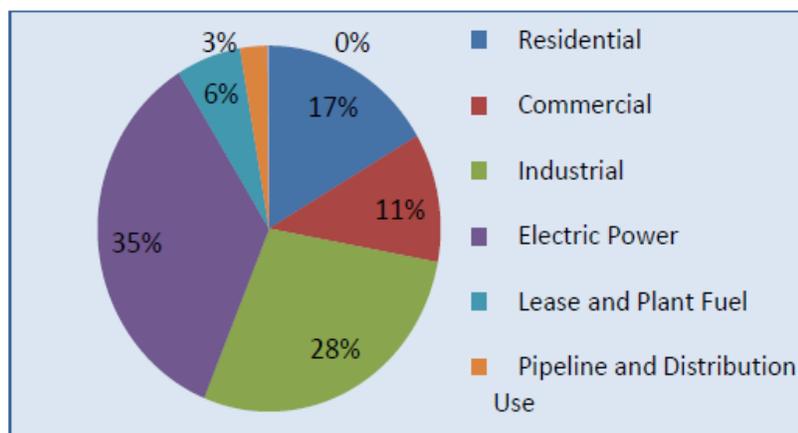

US Gas consumption

US Natural gas consumption has increased by 7% this year standing at 79.86 bcf per day. This increase in consumption is due to higher demand from the residential and industrial sector along with higher exports as compared to last year levels. Higher consumption of natural gas has been one of the reason for the lowest storage injection this October since the year 2005.

There are two demand driving season for natural gas – Winter and Summer. During winter, demand is measured by number of heating degree days and during summer, natural gas demand is measured by the number of cooling degree days.

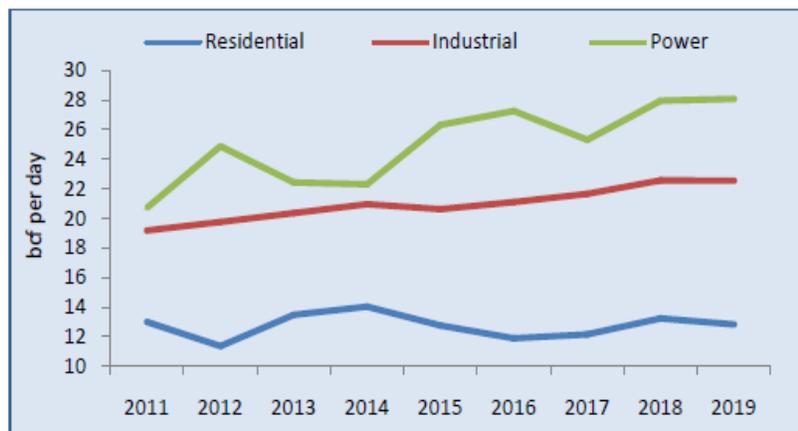

Cooling degree days (CDD) reflects the amount of energy required to cool a residence, industrial or a business. In 2018, CDD stood 18% higher than the previous year and averaged 25% above normal on hottest summer leading to strong air conditioning demand in the summer season. Warmer than normal temperatures extended into the month of September and provided further firmness to the natural gas prices.

Sector wise: Natural Gas Consumption Demand

Source: Narnolia Research, Bloomberg

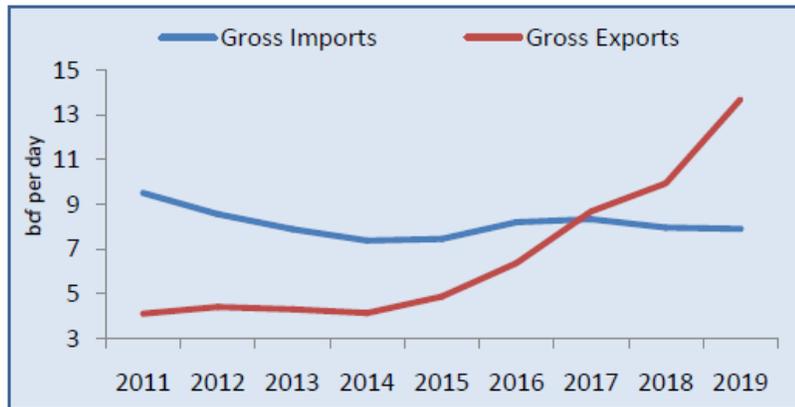

From the above figure, we can conclude that the major consuming sectors of natural gas are Electric Power, Industrial and Residential sector. With Electric power being the major consumer of natural gas comprising 35% of the total natural gas consumption followed by Industrial and Residential sector.

Source: Narnolia Research, Bloomberg

As you can see in the above figure, natural gas demand from largest contributing sector – power and industrial has been rising since the year 2011. Electric Power demand has risen from 20.7 bcf per day in 2011 to 28.07 bcf per day in 2018. Industrial demand of natural gas has increased on a slower rate as compared to electric power however, overall demand from this sector has shown a rising trend.

US Attention towards Exports

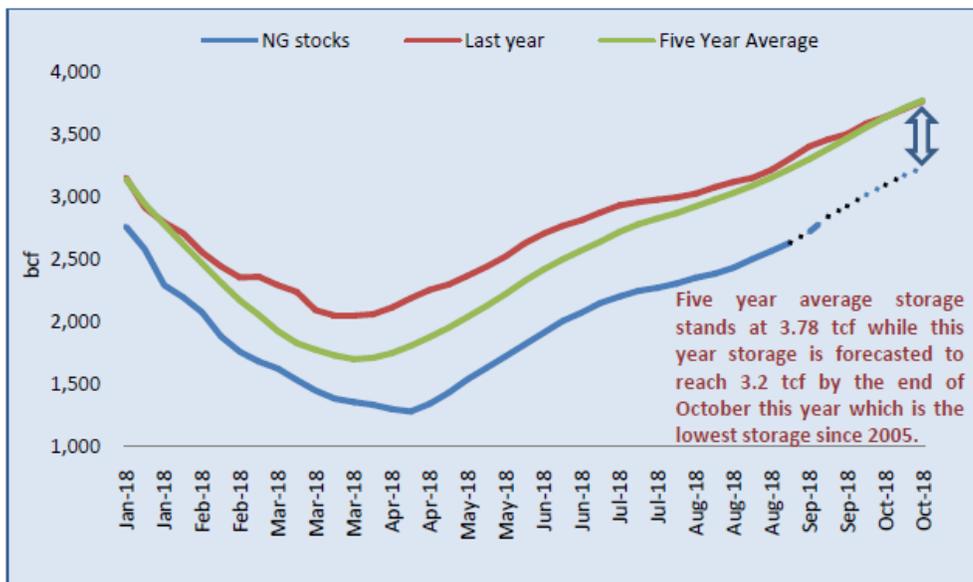

Source: Narnolia Research, EIA Short-Term Energy Outlook

United States had been a net importer while a time ago but after the shale gas revolution in the US, the nation has shifted from net importer to evolving natural gas exporter.

US exports have risen tremendously from 5 bcf per day in 2014 to almost 9 bcf per day in 2018, an increment of 80%. Furthermore, there are expectations of US exports to reach 13 bcf per day in 2019. US Exports accounts for 12% of the total natural gas consumption. US LNG exports have started to rise from last year after the US removed ban on US gas exports. As of now, only few US companies have been allowed to export natural gas to other countries. Moreover, more permission will be granted to other companies to exports this year. We expect US LNG exports to rise by threefold by 2020.

Storage Levels

Source: Narnolia Research, Bloomberg

As per our calculation, we expect U.S. natural gas inventories will total 3.2 trillion cubic feet (Tcf) at the end of October 2018 which will be way below the five year average of 3.781 tcf. At present, natural gas inventories are at 2.722 tcf, natural gas inventories are 586 bcf or 20% below than the last year level and 672 bcf or 17.5% below the five-year average.

The inventory level is at the lowest level for that time of year since 2005 on high air conditioning demand this summer causing power generators to burn more gas than usual and leaving less gas available to go into storage. U.S. gas inventories will start the winter heating season at the lowest level since 2005, leaving the market vulnerable to winter price spikes.

Winter season forecast – Natural gas prices are unlikely to give a steep fall ahead of winter season forecast. If the weather forecast shows a cold winter ahead, prices would immediately get the support on future rise in demand for natural gas.

Outlook

After taking all the factors into consideration, we expect Natural Gas prices are likely to remain strong this winter season. With low stockpiles heading into the winter demand season, robust domestic consumption and higher natural gas exports from US are propping up prices, which are expected to average \$3.10/MMBtu this year and \$3.25/MMBtu in 2019. The only factor keeping the prices closer towards \$3/MMBtu is the record high production of natural gas in the United States. However, tightness in inventory during the winter season will overshadow the worries of record high production which will drive prices higher. **We expect MCX Natural gas prices to test 245-250 levels** in the coming six months time frame. **Therefore, any downside until the end of October towards Rs 205-210 in MCX should be used as the buying opportunity.**

Disclosures: Narnolia Financial Advisors Ltd.* (NFAL) (Formerly Microsec Capital Ltd.) is a SEBI Registered Research Analyst having registration no. INH300002407 valid till 01.12.2020. NFAL is engaged in the business of providing Stock Broking, Depository Participant, Merchant Banking, Portfolio Management & distribution of various financial products. Details of associate entities of NFAL is available on the website at www.narnolia.com
