**Nifty Intraday Chart**

**Market Outlook**

After opening on a subdued note, Nifty traded in the positive territory throughout the day on Monday and closed the day after gaining 0.30% over the previous trading day's close. The broader market was also in favor of bulls as the midcap and small cap indices moved in line with the benchmark index and closed the day in green.

On the sectoral front, some buying interest was witnessed in Realty, Metal, Media and Information Technology stocks while FMCG stocks have shown some weakness. The breadth of the market was slightly negative with more declines than advances.

Last week saw Nifty inching closer to golden mark of 10000. Globally too things changed for better post Janet Yellen confirming that Federal Reserve will remain "highly accomodative" to the markets by saying that interest rate would not have to rise much further- ' the federal fund would not have to rise all that much further to get a neutral policy stance'. S&P500 (US) made a new high on Friday.

Last week Nifty also made a gap between 9830 & 9845 and that would be key support area to be watched this week. Only worrying sign is valuation. Though valuation debate appears to have taken a backseat lately and buy on dip has become consensus view among market participants. And here we must remember that a strong bull market needs skepticism to keep flourishing. Once consensus becomes optimistic, we should surely change the side

**Quote of the Day** : "The best protection against inflation is your own earning power. If you are the best teacher, you will command earning power and get your share of the national economic pie, regardless of the value of the currency. The second best investment is in a good company."

Warren Buffett

**DCBBANK**
**BOOK PROFIT"**
**18th July 2017**

With retail focus and aggressive expansion of branch network, DCB Bank is well poised to grow its loan book in the range of 20%-22% in long run. Assets quality has remained healthy; however recent major policies in economy like demonetization, BS4, loan waiver and GST may affect the assets quality in near term. As per the strategy, management is close to its Oct 2015 guideline of branch expansion and afterwards will slow the pace of expansion. However we don't expect C/I to fall significantly as the newly opened branches are still far away to mature. Margins are at the peak level and we don't expect significant traction in it due to intensified competition. Recent capital raised has let the tier 1 to 13.4%. We largely maintain our estimate of FY19 and expect RoE of 11-12% and RoA of 1-1.1%. The stock is currently trading at 2x P/B FY19. Earlier we had recommended BUYING this stock at a price of Rs 177 with the target price of Rs 205 which got achieved recently. We maintain our previous target price which gives us limited upside of 4% at current market price. Hence we recommend to book profit at this level and we are NEUTRAL till further update.

**KEC**
**"BUY ON DIPS"**
**17th July 2017**

During the FY17 KEC has regained its EBITDA margin range of 9-11% after six financial years. Management's continuous focus on turnaround of SAE, railway and cable vertical has paid the return in terms of improvement in EBITDA margin. In Q4FY17 it has clocked 10.4% EBITDA margin which is the highest in last 24 quarters. However, the revenue growth during the same period remained largely flat on account of soft commodity price, demonization and USD depreciation against INR. SAE business remained sluggish in FY17 in terms of order inflow especially from Mexico, but in Brazil management has witnessing traction and expects spike in performance in late FY18. Recent order win further strengthen the order book position and revenue visibilities has increased from 1.4x to 1.6x of TTM revenue. Strong order book and healthy bid pipeline gives us confidence of 12% plus revenue growth in FY18. Significant improvement in working capital on account of better AR collection resulted into higher PAT. Management's continuous approach to drag down receivables days in range of 180 days will further strengthen the bottom line.

Recently stock has achieved our recommended target price but still we remain bullish on the stock. Any dips in price going ahead give the opportunity to buy, so we advice our investors to remain invested in the stock and "BUY ON DIPS" with the target price Rs.325.

**Top News**

**Cyient Mgt Guideline :** Cyient said the first quarter is always soft in terms of EBITDA performance because of wage increases in Q1 . However, in the June quarter this time the additional pressure was due to exchange rate because the rupee softened against the dollar almost 5 percent. Company is confident of margins improving from the second quarter onwards and also confident revenue growth in FY18 being around 10-12 percent.

Company said 80 percent of that is executable in any given year but the backlog is quite strong and would likely add to that

The order intake in Q1 also is usually lower but would pick up in Q3 and Q4.

The pipeline is very strong and the momentum of order intake of around 10 percent seen in the earlier fiscal will

**National Aluminium Company** said that China has commissioned 3.9 million tonne (mt) low cost capacity, their consumption is also increasing in construction and other sectors . Aluminium prices are up 20 percent year on year. In today's Chinese gross domestic product (GDP) data, aluminium production numbers were up 7.4 percent in June which is believed to be a record. Q1FY18 average aluminium price is at USD 1,910 per tonne but we expect prices to fluctuate in the band of USD 1870-1925 per tonne

**Balrampur Chini Mills Mgt Guideline :** The government hiked the import duty on sugar to 50 percent from 40 percent to curb inward shipments and perhaps give a little bit of a leg up for domestic prices as well as farmers.

It is a step in the right direction and will definitely help curb import of sugar, adding that unwanted sugar will be avoided because there is enough sugar in the country.

Going forward with all the policies and cane sugar prices in place, the sugar prices are expected to be neither soft nor be aggressive but would be stable

Profits are mainly determined by cane prices and sugar prices and as of now both look okay . However, in terms of production, crushing and recovery, it looks to be a record year.

**Gujarat State Petronet Mgt Guideline :** Company expects 8-10 percent transmission volume growth in FY18. Company Will see volume across petchem refinery and city gas distribution verticals . GSPL submitted tariff hike proposal to the regulator. Company expects tariff revision once regulator takes opinion from various parties.

**Premjinvest, the investment arm of Wipro Chairman Azim Premji,** bought 3.26 percent stake in Kishore Biyani's Future Lifestyle Fashions Ltd (FLFL) for nearly Rs 196 crore through open market transactions.
