Nifty Intraday Chart

Market Outlook

After opening with a red session, Nifty continuously fell to make a weekly low of 9448.75 on Friday. However it gave some pullback rally from week's lower point and closed the week at 9520.90. It had a net loss of 0.56% over the previous week's close. The broader market was in favor of bulls as the midcap and small cap indices outshined the benchmark index and closed the week in green.

On the sectoral front, some buying interest was witnessed in FMCG, Metal and Pharmaceutical stocks while PSU Banking and Media stocks have shown some weakness. The FMCG index closed the week at its lifetime higher price at 26752 due to the sharp up move of ITC.

During last one month Nifty has traded between 9550 and 9710, a range of mere 1.7%. Nifty losing volatility after sharp rally since December 2016 is a sign of maturity of our market or is this a lull before the storm, July series will surely let us figure out. In fact even global equity markets are trading strong almost in a bullet proof manner and this is amazing. US S&P 500 VIX has fallen to single digit levels. Lately cause of concern have been the performance of the broader market. Mid and Small cap stocks were leaders of the current market rally, but since middle of May Nifty Mid cap index and Nifty Small cap index surely has gone into a correction mode. And traders and short term investors need to be very cautious on small and micro cap stocks as valuation remains quite stretched for most of the small and micro cap stocks. Though Nifty continue to be in upward journey but if Nifty falls below 9500, it will bring sharper fall in mid, small and micro cap stocks.

Derivative range continues to be 9550-9750 though large open interest at 9700 CE make 9700 a strong resistance for current June series. Early indication of open interest built up for July series suggests wider Nifty range and consequently sharp volatility. BankNifty particularly looks vulnerable for volatility spike led by mid and small PSU banks where NPA woes appears to be getting further aggravated due to RBI latest directives. Early July series will be full of news about GST implementation and 1QFY18 and 2QFY18 surely will see negative impact on corporate earnings. GSTN system is expected to process 3.5 billion invoices every month, a change of this order surely will be nerve wrecking for many businesses particularly smaller one. We see clarity emerging only in September as far as fundamental of the market is concerned.

Quote of the Day : "The four most expensive words in the English language are, 'This time it's different'."
- Sir John Templeton

IEA Snapshot

FORCEMOT

"BUY"

3th July 2017

Force Motors Limited has strongly positioned itself in the light and small commercial vehicle segment with market share of over 45%. Travellers, the company's most successful brand holds a market share of 70%. The company has also a technical edge over its peers as it manufactures and assembles engines for luxury car makers like Mercedes and BMW in the Indian market. The company generates about 37% of its revenues from sub-contracting business. We expect that the reduction in tax under GST will encourage the customers to purchase luxury vehicles. We expect RoE to improve by 400 bps to 14.6% in FY19 based on strong traction in Travellers segment, favorable demand outlook for luxury cars and improvement in margins on the back of operating leverage. Currently, the stock is trading at 2.6x FY19E P/B. Considering the immense growth potential going ahead, we recommend 'BUY' on Force Motors with a target price of Rs.4850.

IGL

"NEUTRAL"

30th June 2017

IGL has posted strong 14% volume growth in FY17. As per IGL estimates about 40,000 vehicles are yet to convert to CNG in next 3-4 years and CNG volumes to grow further on the back of network expansion by Noida Transport Corporation which gives us visibility for volume growth in upcoming years. With the declining cost of gas, IGL has managed to improve gross margin to 50% in FY17 from 44% in FY16. Apart from that IGL is commissioning CNG and PNG distribution network in Rewari District which may escalate repairs and maintenance cost in upcoming months, we expect operations in Rewari to be stabilized in next 4-5 months which may hamper margins for couple of quarters. At current the stock is trading at 4.9x times FY17 P/B. Considering the current market rally, valuation seems quite higher and hence we remain Neutral with the target price of Rs.950.
