

Trading Calls

GRANUELS 30th November 2018

Long/Buy

Since 10th Sep 2018 stock is falling as corrective as larger wave (II). In attached chart we can see that it has completed larger wave (I) in impulse 1-2-3-4-5 pattern with excellent upmove from zero point of wave 1 with good volume also and retraced almost 75% of just preceding larger impulse. It seems it has formed larger wave (II) at 84.30 or may form in the range of 82-80 (which is our second buying zone). Momentum oscillator Stochastics is trading in oversold zone and giving sign of reversal. Hence we advise to buy in the range of 89.50-87.50 and on decline towards 82-80 for the expected wave of iii of 3 of (III) target of 104 and 114 with 69 as SL on closing basis.

GOGREJAGRO 3rd October 2018

Long/Buy

Since 23rd Apr 2018 stocks is in complex correction. It seems it has formed wave B on 1st Oct 2018 at 492.55 and further we expect that wave C may help it to move on upper side. During entire fall of wave B, volume was low which is technically good. Momentum oscillator Stochastics is also supporting this pattern. Hence we recommend buy in the range of 544-535 and on decline towards 520-515 for the price targets of 585 and 601 with 490 as SL.

Market	Value	% Change
SGX Nifty	10687.00	0.59%

Nifty Key Levels

Support	S1: 10550	S2 : 10535
---------	-----------	------------

Resistance	R1 : 10640	R2 : 10680
------------	------------	------------

Market Outlook

Nifty has corrected above 3% since last four successive trading sessions. The correction has come due to the formation of negative divergence in Stochastic. Yesterday Nifty has also breached its psychological support of 200 SMA (10750). However we believe Nifty to find a strong support at 10574 (50 SMA) and some pullback is also expected from here as the leading indicators (like Stochastic & RSI) are approaching towards their normal level.

VIEW

Domestic market pulled back higher around three percent in the week ahead followed by strong global cues along with strong rupee and softening crude oil prices. Although GDP growth for second quarter 2018-19 at 7.1% seems disappointing but India still leads the world in term of growth parameter. As of now, focus will shift on RBI monetary policy, OPEC meeting and upcoming state election results which would be keenly watched by the investors in near term. These data and events will provide further direction to the market. Though declining crude oil prices and strengthening rupee are conducive factors for market but we remain cautiously optimistic in the coming days. However, retracement in fundamentally sound companies should be taken as a buying opportunity.

NIFTY-

- a) Index has broken the sturdy wall of 10755-10780 zone and it is likely to test 61.8 retracement of 11080 levels
- b) Although it formed doji type of candlesticks pattern at 50% fibonacci retracement (Fall from 11173 to low of 10004) which suggest indecisiveness
- c) If index is able to past the current high of 10923 then it can extend this rally towards 11080 levels
- d) Support comes at 10699 followed by 10489 levels.

CHART ANALYSIS

SUPPORT & RESISTANCE LEVELS

	NIFTY LEVEL	JUSTIFICATION
Resistance 2	11080	61.8% Golden Ratio
Resistance 1	10923	Immediate resistance
Close	10876	
Support 1	10699	Previous swing low
Support 2	10489	Previous swing low

VIEW

Banknifty gave a rising wedge breakout on up side and it became precursor for Nifty which pulled it higher. Resuscitating announcement of Rs 42000 crore to PSU banks had provided respite to current liquidity issues which lifted the sentiment of market participants. Index smartly recoiled from the low of 26025 by forming strong bull candle.

OBSERVATIONS:

- 1) A **Long green candlestick** pattern was formed on the weekly chart suggest further upside in near term
- 2) **Bullish crossover of MACD** in negative territory imply bullishness
- 3) Sustainability of RSI above 9 EMS also strengthen the upside move

Gist of above observation that the short term (1-3 months) trend of Bank nifty is looking bullish. However, it may face immediate resistance at 27003 where we can expect some profit booking till the levels of 25945 level where key support is seen due to line of polarity. However, on crossing above 27003, it can extend gain further till 27405 and 27660 levels.

CHART ANALYSIS

SUPPORT & RESISTANCE LEVELS

RESISTANCE/SUPPORT	BANKNIFTY LEVEL
Resistance 2	27405
Resistance 1	27003
Close	26862
Support 1	25945
Support 2	25380

VIEW

Indian currency continues its winning streak from last few weeks against the US dollars. This time commentary of Fed chairman Powell's dovish comment played a vital role in providing strength to Rupee. It was also outperformed on the backdrop of lower crude prices and slowdown in US rate hike cycles. Before two months, RBI increased its FX reserves supply, When Rupee was under huge pain. Hence, this is a golden opportunity for the RBI to recapitalize its lost reserve. Expect volatility to remain high in the near term as number of crucial events lined up in coming weeks and focus will now shift to RBI's monetary policy meeting, OPEC meeting and outcome of state election results.

TECHNICAL FACTORS-

- a) After a strong up-move since the beginning of 2018, USDINR has been on a correction mode
- b) It gave a major breakout at 69.40 level after which it bounced up to 74.50 level and has corrected back to 69.57 levels
- c) Negative crossover in MACD and sustainability of RSI below 50 are giving more room for correction in the coming days
- d) Other indicators are also drifting lower which suggest further weakening of the pair.
- e) Immediate support lies at 69.40 below which it can slip down till 67.60 and 66.90 levels.
- f) Immediate resistance is at 71.05 followed by 72.10 levels.

Hence we advise to buy in the range of 89.50-87.50 and on decline towards 82-80 for the expected wave of iii of 3 of (III) target of 104 and 114 with 69 as SL on closing basis.

LME Aluminium prices have fallen towards two year low at \$1920 per tonne after the supply tightness eased in the raw material sector and after United States decided to delay the sanctions on Russia, one of the world's largest producer of the metal. Prices have moved below its cost of production in China pressurizing the margins of the producers.

Globally, aluminium production has remained flat as the major producers like China is unable to increase the output as the current prices are unprofitable. While, US on the other side is starting to start its smelters but the outages at Canada, Brazil have offset the rise in production. China contributes almost 56% to the global production. And saying if China slows down its production rate, the world would be in huge shortfall in the coming year.

China Supply Concerns:

China's aluminium production has been falling since last three months despite of no winter output curtailments in place. China's capacity growth rate is slowing as old capacity is been shut down by the local government following strict targets set by China and the rate of new smelter capacity is falling. Although, the key ingredient, bauxite is restricted to produce during winter period on China's environmental crackdown.

Aluminum Corp of China Ltd also known as Chalco, China's largest producer, is cutting output on some of its aluminum production lines in northern China. The company is set to reduce some 470,000 tonnes of production, nearly 12% of company's output. Two smelters in Qinghai province of China of 270,000 tonnes capacity have gone off line in the last couple of weeks. These cuts have been inculcated as prices are trading below cost of production driven by reducing demand and ample of supply, forcing smelters to either partially or fully shut down its production.

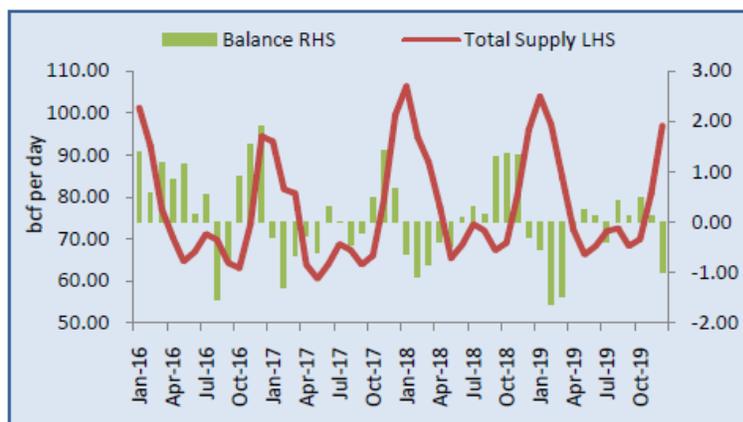

US Sanctions Tensions

US sanctions on Russia will continue add upside volatility in global aluminium prices. The U.S. Treasury Department last month postponed a Dec. 12 deadline for Deripaska to reduce his holdings in the companies, giving the Russian tycoon until Jan. 7.

Outlook

Overall, aluminium prices have declined drastically fell by almost 20% since April 2018 on extension of US sanction on Rusal and easeness in raw material supply. But we believe still some tightness in alumina market persists, as the Alunorte refinery is partially shut. Furthermore, Chinese production is expected to come down on smelters shutdown due to lower prices. However, demand weakness due to trade duties can provide some selling pressure. but prices will remain supported at lower levels. We expect MCX Aluminium prices will take support of 127-125 levels and move higher towards Rs 150-155 per kg in the short term.

Demand Supply Scenario:

Source: Narnolia Research, U.S. EIA

US Natural gas market normally shifts into deficit during the November to February period i.e. winter season in US. During this high period of demand, natural gas should be well-supplied or else supply tightness worry will emerge and prices will start to rally higher.

US Dry gas production

US Dry natural gas production is rising this year and is estimated to be at 82.2 bcf per day in August, up by 0.7 bcf/day in July, almost 7.4 bcf per day higher than last year. In 2018, US Dry gas production has increased by almost 10% on an average as compared to last year. Furthermore, EIA expects the dry natural gas production to keep rising on an average of 84.7 bcf per day in the coming year. Due to significant natural gas production increase in 2018, NYMEX natural gas prices have been unable to breach \$3 per MMBtu for the most of the summer.

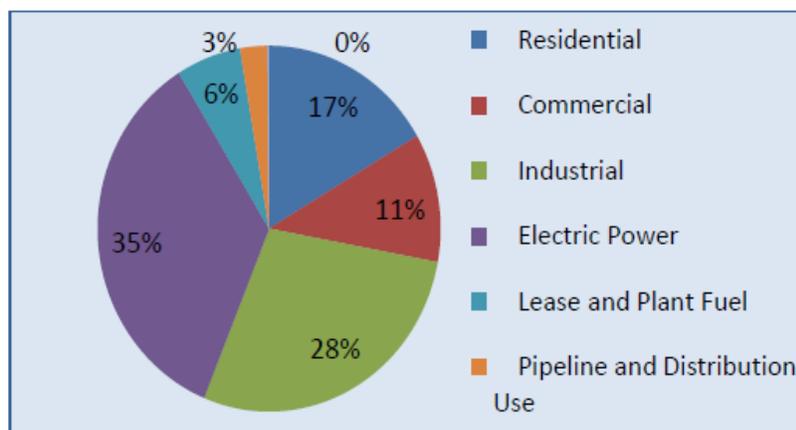

US Gas consumption

US Natural gas consumption has increased by 7% this year standing at 79.86 bcf per day. This increase in consumption is due to higher demand from the residential and industrial sector along with higher exports as compared to last year levels. Higher consumption of natural gas has been one of the reason for the lowest storage injection this October since the year 2005.

There are two demand driving season for natural gas – Winter and Summer. During winter, demand is measured by number of heating degree days and during summer, natural gas demand is measured by the number of cooling degree days.

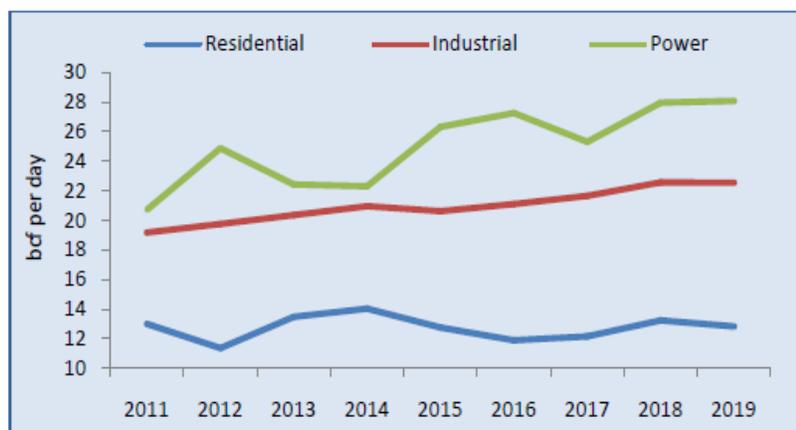

Cooling degree days (CDD) reflects the amount of energy required to cool a residence, industrial or a business. In 2018, CDD stood 18% higher than the previous year and averaged 25% above normal on hottest summer leading to strong air conditioning demand in the summer season. Warmer than normal temperatures extended into the month of September and provided further firmness to the natural gas prices.

Sector wise: Natural Gas Consumption Demand

Source: Narnolia Research, Bloomberg

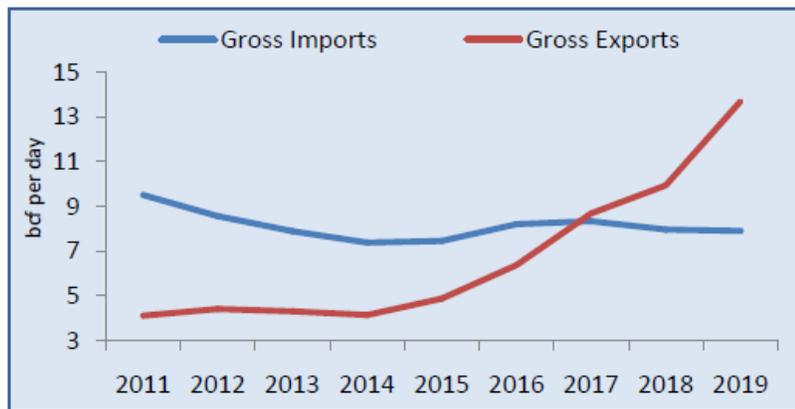

From the above figure, we can conclude that the major consuming sectors of natural gas are Electric Power, Industrial and Residential sector. With Electric power being the major consumer of natural gas comprising 35% of the total natural gas consumption followed by Industrial and Residential sector.

Source: Narnolia Research, Bloomberg

As you can see in the above figure, natural gas demand from largest contributing sector – power and industrial has been rising since the year 2011. Electric Power demand has risen from 20.7 bcf per day in 2011 to 28.07 bcf per day in 2018. Industrial demand of natural gas has increased on a slower rate as compared to electric power however, overall demand from this sector has shown a rising trend.

US Attention towards Exports

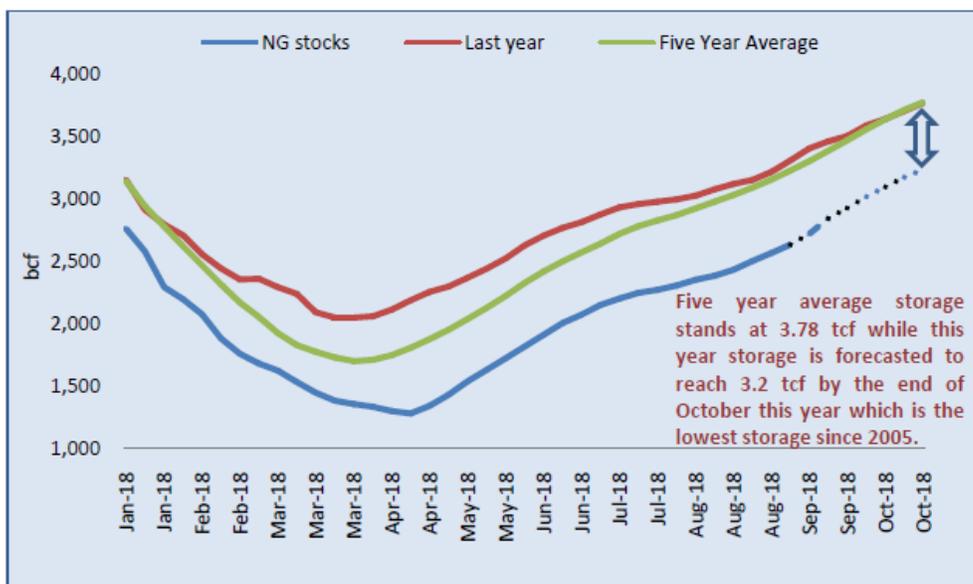

Source: Narnolia Research, EIA Short-Term Energy Outlook

United States had been a net importer while a time ago but after the shale gas revolution in the US, the nation has shifted from net importer to evolving natural gas exporter.

US exports have risen tremendously from 5 bcf per day in 2014 to almost 9 bcf per day in 2018, an increment of 80%. Furthermore, there are expectations of US exports to reach 13 bcf per day in 2019. US Exports accounts for 12% of the total natural gas consumption. US LNG exports have started to rise from last year after the US removed ban on US gas exports. As of now, only few US companies have been allowed to export natural gas to other countries. Moreover, more permission will be granted to other companies to exports this year. We expect US LNG exports to rise by threefold by 2020.

Storage Levels

Source: Narnolia Research, Bloomberg

As per our calculation, we expect U.S. natural gas inventories will total 3.2 trillion cubic feet (Tcf) at the end of October 2018 which will be way below the five year average of 3.781 tcf. At present, natural gas inventories are at 2.722 tcf, natural gas inventories are 586 bcf or 20% below than the last year level and 672 bcf or 17.5% below the five-year average.

The inventory level is at the lowest level for that time of year since 2005 on high air conditioning demand this summer causing power generators to burn more gas than usual and leaving less gas available to go into storage. U.S. gas inventories will start the winter heating season at the lowest level since 2005, leaving the market vulnerable to winter price spikes.

Winter season forecast – Natural gas prices are unlikely to give a steep fall ahead of winter season forecast. If the weather forecast shows a cold winter ahead, prices would immediately get the support on future rise in demand for natural gas.

Outlook

After taking all the factors into consideration, we expect Natural Gas prices are likely to remain strong this winter season. With low stockpiles heading into the winter demand season, robust domestic consumption and higher natural gas exports from US are propping up prices, which are expected to average \$3.10/MMBtu this year and \$3.25/MMBtu in 2019. The only factor keeping the prices closer towards \$3/MMBtu is the record high production of natural gas in the United States. However, tightness in inventory during the winter season will overshadow the worries of record high production which will drive prices higher. **We expect MCX Natural gas prices to test 245-250 levels** in the coming six months time frame. **Therefore, any downside until the end of October towards Rs 205-210 in MCX should be used as the buying opportunity.**

Disclosures: Narnolia Financial Advisors Ltd.* (NFAL) (Formerly Microsec Capital Ltd.) is a SEBI Registered Research Analyst having registration no. INH300002407 valid till 01.12.2020. NFAL is engaged in the business of providing Stock Broking, Depository Participant, Merchant Banking, Portfolio Management & distribution of various financial products. Disclaimer:

This report has been prepared by Narnolia Financial Advisors Ltd. (NFAL) and is meant for sole use by the recipient and not for public circulation. The report and information contained herein is strictly confidential and may not be altered in any way, transmitted to, copied or distributed, in part or in whole, to any other person or to the media or reproduced in any form, without prior written consent of NFAL. The report is based on the facts, figures and information that are considered true, correct, reliable and accurate. The intent of this report is not recommendatory in nature. The information is obtained from publicly available media or other sources believed to be reliable. Such information has not been independently verified and no guaranty, representation of warranty, express or implied, is made as to its accuracy, completeness or correctness. All such information and opinions are subject to change without notice. The report is prepared solely for informational purpose and does not constitute an offer document or solicitation of offer to buy or sell or subscribe for securities or other financial instruments for the clients. Nothing in this report constitutes investment, legal, accounting and tax advice or a representation that any investment or strategy is suitable or appropriate to your specific circumstances. The securities discussed and opinions expressed in this report may not be suitable for all investors, who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific recipient. Certain transactions - including those involving futures, options, another derivative products as well as non-investment grade securities - involve substantial risk and are not suitable for all investors. Each recipient of this document should make such investigations as it deems necessary to arrive at an independent evaluation of an investment in the securities of companies referred to in this document (including the merits and risks involved), and should consult his/her/its own advisors to determine the merits and risks of such an investment. Though disseminated to all the customers simultaneously, not all customers may receive this report at the same time. NFAL will not treat recipients as customers by virtue of their receiving this report. Neither the Company, nor its directors, employees, agents or representatives shall be liable for any damages whether direct or indirect, incidental, special or consequential including lost revenue or lost profits or lost opportunities that may arise from or in connection with the use of the information/report. The person accessing this information specifically agrees to exempt NFAL or any of its affiliates or employees from, any and all responsibility/liability arising from such misuse and agrees not to hold NFAL or any of its affiliates or employees responsible for any such misuse and further agrees to hold NFAL or any of its affiliates or employees free and harmless from all losses, costs, damages, expenses that may be suffered by the person accessing this information due to any errors and delays.

This report is not directed or intended for distribution to or use by any person or entity resident in a state, country or any jurisdiction, where such distribution, publication, availability or use would be contrary to law, regulation or which would subject NFAL & its group companies to registration or licensing requirements within such jurisdictions.
