

Trading Calls

HDFCLIFE BUY 06th March 2019

HDFCLIFE gave reversal from its downtrend. The stock has also given bullish breakout above 50, 100 DMAs. So some fresh upside is expected in the stock from the current level. Therefore we recommend initiating fresh long position in the stock for a maximum target of RS 454.

ALUMINIUM BUY 06th December 2018

In Aluminium Chinese production is expected to come down on smelters shutdown due to lower prices. However, demand weakness due to trade duties can provide some selling pressure. but prices will remain supported at lower levels. We expect MCX Aluminium prices will take support of 127-125 levels and move higher towards Rs 150-155 per kg in the short term.

Market	Value	% Change
SGX Nifty (at 8.15 am IST)	11717.50	-0.28%

Nifty Key Levels

Support	S1: 11550	S2 : 11500
Resistance	R1 : 11700	R2 : 11750

Market Outlook

Bullish harami on daily chart contrasting from the advance decline ratio suggest tussel between Bulls & Bears will continue in the coming sessions also. Index has been consolidating between 11550 and 11750 levels for past eight sessions and requires a decisive breakout to start the next leg of rally. If Nifty sustains above 11700, it may extend up to 11750-11780 zone. On the downside, the 11550 level will be seen as support

VIEW

Domestic market failed to capitalize gain after kissing all time high and faced stiff resistance at top. Any consolidation near the previous top in Nifty can provide upward thrust with momentum although prices are sustaining near previous life time high are giving the cues for the formation of Double top but the confirmation of the same is yet to come. We predict that market action can take indication from the upcoming quarterly four earning season and volatility will continue to haunt the market till election result finalize.

NIFTY-

- Index retraced after reaching all time high but friday session had seen a pull back suggest bulls will able to maintain its positive rhythm
- Formation of doji suggest indecisiveness but sustainability of prices above upper band of Bollinger implying power for Bulls
- Weekly MACD continues to remain bullish while trading above its signal line
- Weekly RSI stood above 65 mark without showing any divergence
- As of now, Index has to hold above 11600 level to witness an upmove towards 11760 and 11850 levels
- Support lies at 11550 level followed by 11400 level
- As long as it sustains above 11400 level, dips can be utilized for buying.

Banknifty Weekly

8-Apr-19

VIEW

After opening with a negative session, Banknifty fell to make a weekly low of 29809.90 on Thursday and closed the week with a net loss of 1.12% over its previous week's close. The profit booking was witnessed both in PSU & Private banking stocks during the week and the indices closed after losing 1% each.

OBSERVATIONS:

- 1) Banknifty is trading above its recent breakout point (29150) as well as above all the major DMAs (50, 100 & 200).
- 2) Momentum indicators (RSI & Stochastic) are approaching towards their normal levels.

According to the above observations it can be concluded that the short term and medium term trend of Banknifty is looking positive as it is trading above all the major DMAs. The current position of momentum indicators are also indicating that the recent consolidation process (price / time correction) is likely to end very soon. Therefore traders should initiate fresh long positions (for some speculation profit) in Banknifty by keeping stop loss at 29725 while the investors should wait for the level of 29200-29300.

CHART ANALYSIS

VIEW

Rupee skidded 19 paise to finish at 69.17 per US dollar on Friday due to increase demand for the greenback from the importer. Rupee remain under pressure in the consecutive week due to strengthening of the dollar against key currencies, though persistent foreign fund inflow restricted the fall. Dollar index which gauges the greenback's strength against a basket of six currencies, rose up to 0.01% to 97.31 suggest negative bias in coming sessions

TECHNICAL FACTORS-

- a) Formation of double bottom suggest upside move for pair but breakout has yet to come
- b) Bullish crossover in MACD on daily chart showing bullish implication
- c) Key support lies at 68.35 followed by 67.90 and as long as it sustains above the same rupee will remain under pressure
- d) Upside breakout is expected above 69.45 from where it can extend up to 70.05 where it can face its next resistance.

HDFCLIFE gave reversal from its downtrend. The stock has also given bullish breakout above 50, 100 DMAs. So some fresh upside is expected in the stock from the current level. Therefore we recommend initiating fresh long position in the stock for a maximum target of RS 454.

LME Aluminium prices have fallen towards two year low at \$1920 per tonne after the supply tightness eased in the raw material sector and after United States decided to delay the sanctions on Russia, one of the world's largest producer of the metal. Prices have moved below its cost of production in China pressurizing the margins of the producers.

Globally, aluminium production has remained flat as the major producers like China is unable to increase the output as the current prices are unprofitable. While, US on the other side is starting to start its smelters but the outages at Canada, Brazil have offset the rise in production. China contributes almost 56% to the global production. And saying if China slows down its production rate, the world would be in huge shortfall in the coming year.

China Supply Concerns:

China's aluminium production has been falling since last three months despite of no winter output curtailments in place. China's capacity growth rate is slowing as old capacity is been shut down by the local government following strict targets set by China and the rate of new smelter capacity is falling. Although, the key ingredient, bauxite is restricted to produce during winter period on China's environmental crackdown.

Aluminum Corp of China Ltd also known as Chalco, China's largest producer, is cutting output on some of its aluminum production lines in northern China. The company is set to reduce some 470,000 tonnes of production, nearly 12% of company's output. Two smelters in Qinghai province of China of 270,000 tonnes capacity have gone off line in the last couple of weeks. These cuts have been inculcated as prices are trading below cost of production driven by reducing demand and ample of supply, forcing smelters to either partially or fully shut down its production.

US Sanctions Tensions

US sanctions on Russia will continue add upside volatility in global aluminium prices. The U.S. Treasury Department last month postponed a Dec. 12 deadline for Deripaska to reduce his holdings in the companies, giving the Russian tycoon until Jan. 7.

Outlook

Overall, aluminium prices have declined drastically fell by almost 20% since April 2018 on extension of US sanction on Rusal and easeness in raw material supply. But we believe still some tightness in alumina market persists, as the Alunorte refinery is partially shut. Furthermore, Chinese production is expected to come down on smelters shutdown due to lower prices. However, demand weakness due to trade duties can provide some selling pressure. but prices will remain supported at lower levels. We expect MCX Aluminium prices will take support of 127-125 levels and move higher towards Rs 150-155 per kg in the short term.
