

Trading Calls

RELIANCE BUY 23rd August 2019

On daily scale RELIANCE has formed a DB around 1095 and after forming DB it has moved in impulse towards 1304.45, now it is trading in wave 2 and retraced 37.5% of just preceding impulse (wave1) and yesterday it has opened the door for wave 3. In case of normal wave 2 formation we advise to buy in the range of 1255 to 1235 and if it enters in complex wave 2 then we further recommend to accumulate in the range of 1173-1147. Here wave1 is strong so wave 2 never be complex in normal case as it has already given indication of less than 50% retracement. Hence we recommend buy for the price target of 1333 and 1375 with 1072 (on closing basis) as stop loss.

GAIL BUY 10th July 2019

Weekly chart of GAIL reveals that demand is increasing and supply is diminishing. Channel support line from lower levels is displaying trend reversal and creates buying opportunity at current juncture. As of now, stock is taking support from its ascending triangle resistance line on monthly chart which augur well for the Bulls and indicate surge on upside. Apart from this, rising Histogram in MACD daily signals optimism, which further suggest upside move in the counter in coming sessions. BUY GAIL AROUND 140-145, ON DIP 120-125 SL 110(CLOSING BASIS), TARGET 180-200

RECL BUY 25th June 2019

Scrip is moving in a well defined ascending channel with multiple touch point and appears to be having a strong support around 138- 142 levels as it bounced back couple of time from the demand line. It also maintained its uptrend on the long term chart and is trading well above its short and long term moving averages(20/ 50 /200 DMA). The momentum oscillator, RSI is also favors the price pattern. One can accumulate the stock around 155 and lower around 138-142 zone for an upside target of 220/260 and a stop loss should maintain 125 closing basis.

Market	Value	% Change
SGX Nifty (at 8.00 am IST)	11283.00	-0.49%

Nifty Key Levels

Support	S1: 11235	S2 : 11160
Resistance	R1 : 11330	R2 : 11420

Market Outlook

Shrugging of the bearishness of previous few days, index rebounded from lower level as buying emerged from the line of polarity which is also 61.8% retracement the entire upmove from 10762 to 11695. Momentums is seen across sectors with broad based participation. Going forward, we believe the upcoming earnings season would dictate the trend for the market. As of now, next hurdle is seen near 11420 levels, which is falling trend line resistance and previous breakdown zone. Any decisive close above the same can add more gains. Support lies at 11235 followed by 11160 levels.

VIEW

Domestic market has been witnessing roller coaster ride amid wild swing of 396 point and volatility seems to be still haunting in the market. After the strong tussle with Bulls in previous week, Bears flexed their muscles again and broader market closed in red. Market participants sentiment was dampened due to the exposure of several banks to NBFCs & reality sectors after the crisis in PMC & Lakshmi Vilas Bank which gave Bears to chance for stepping in. RBI cautious commentary on economic growth and sharp downside revision of FY20 GDP growth forecast from 6.9% to 6.1% also weighed market sentiments. Going forward from here, Investors can take cues from the outcome of US-CHINA meeting and earning season of domestic market which is starting from next week.

Technical Outlook-

- a) Appearance of long bearish candle after the formation of long leg doji not augur well for Bulls
- b) Indicators and oscillators are also not looking conducive for price pattern
- c) Point of polarity where previous resistance can act as support in coming week is the next hope for Bulls
- d) If Index will not able to survive above 11100-11140 zone, then fresh selling can drive the nifty towards 10945 and 10850
- e) However, resistance stands at 11260 (near 200 DMA) and 11405 (near 100 DMA)

CHART ANALYSIS

SUPPORT & RESISTANCE LEVELS

	NIFTY LEVEL	JUSTIFICATION
Resistance 2	11405	Near 100 DMA
Resistance 1	11260	Near 200 DMA
Close	11174	
Support 1	11140	Line of Polarity
Support 2	10945	Previous swing low

VIEW

In line with our expectation selling was witnessed in Banknifty throughout last week. At the end of the week the index closed with a net loss of 7% over its previous week's close. The selling was witnessed across the board. SBI, Axis Bnak and ICICI bank were the major losers during the week and they closed after losing 6%-11%.

OBSERVATIONS:

- 1) Banknifty has breached 200 DMA.
- 2) A 'Bearish Doji Star' pattern was formed on the weekly chart of Banknifty.

According to the above observations it can be concluded that the near term trend of Banknifty is looking negative. The closing below 200 DMA along with formation of Bearish Doji Star on the weekly chart indicates more downside in the near future. On the downward path 26300 would act as strong support of the Banknifty as it is the multi-year support of the index. Therefore we recommend initiating fresh long position in Banknifty either near 26300 or only above 200 DMA (currently is at 28795)

CHART ANALYSIS

SUPPORT & RESISTANCE LEVELS

RESISTANCE/SUPPORT	BANKNIFTY LEVEL
Resistance 2	30000
Resistance 1	29000
Close	27730
Support 1	27100
Support 2	26700

VIEW

Easing trade tension between US & China and accommodative stance adopted by RBI had given some relief to Rupee due to this pair faced stiff resistance from its previous swing high which helped Rupee to gain around 1 Rs during the week. As of now in the coming sessions, we expect pair will trade lower as indian government keeps on check inflation and current account deficit under control.

TECHNICAL FACTORS-

- a) Emergence of gravestone doji on daily chart suggest further selling pressure
- b) Sustainability of RSI below 50 imply bearishness
- c) However, pair is going to face stiff resistance near 71.40 while sustainability above the same can weaken the rupee till 72 mark
- d) A decisive break below 70.35 can push down towards 70.10 and 69.65 mark on downside

Technical Chart

STDC : BUY RECL AROUND 161-155 AND 138-142 SL 125 TARGET 220/ 260

Scrip is moving in a well defined ascending channel with multiple touch point and appears to be having a strong support around 138- 142 levels as it bounced back couple of time from the demand line. It also maintained its uptrend on the long term chart and is trading well above its short and long term moving averages(20/ 50 /200 DMA). The momentum oscillator, RSI is also favors the price pattern. One can accumulate the stock around 155 and lower around 138-142 zone for an upside target of 220/260 and a stop loss should maintain 125 closing basis.

Last week, base metal prices were hit badly after US President Trump announced to impose additional tariffs on further \$300bn of Chinese imports stating that the 10% tariffs, due to take effect on 1 September which means it will tax all the Chinese imports. This states the trade war has reached on another level slowly damaging the health of the economy and thereby reducing the demand for industrial commodity.

Lead prices started to rise towards \$2100/tonne in June 2019 on the back of supply disruption and environmental crackdowns on smelters in China with additional support coming due to falling inventories. However, looking at the current scenario we believe this upside in prices is unlikely to sustain.

Looking at the demand supply scenario, global lead market shifted to surplus of 13,000 tonnes in May 2019 after showing a deficit of 31,000 tonnes in the month of April 2019. In the coming months, we believe this surplus will expand on account of fall in demand from the auto sector and lower manufacturing activity weakening demand for the metal worldwide.

Demand-Supply Scenario:

According to the ILZSG, the Group anticipates that global lead supply will exceed demand by 71,000 tonnes in 2019. The production is mainly anticipated to expand in China and Australia in 2019. China's lead production expanded 16.6 percent to 2.87 million tonnes in the first six months of 2019 according to the National Development and Reform Commission (NDRC).

	2016	2017	2018	2019*
Mine Production*	4689	4713	4671	4750
World Refined Production	11169	11589	11642	11940
World Refined Consumption	11141	11740	11721	11870
Surplus/Deficit	28	-151	-79	70
<i>Source: ILZSG, Narnolia Research</i>				(Figs in tonnes)

Current Scenario: Three days ago, Nyrstar announced that it has restarted the blast furnace at its Port-Pirie lead smelter in Australia after two months shutdown due to an unplanned outage in late May resulting into a production loss of around 30,000 tonnes. On the London Metal Exchange, the benchmark spread i.e. the difference between the cash price and that for three-month delivery remains at discount of \$13 per tonne. This shifted the current premium of Lead into discount.

Inventory: The rising LME inventory is a cause for concern for the traders. LME warehouses saw an inflow of 27,625 tonnes of lead in a span of one week, taking total LME lead stocks to a one-month high of 85,375 tonnes, although total LME Lead inventories are still down significantly from the 107,000 tonnes held at the start of the year.

Conclusion: The restart of lead plant, rising inventories and increasing production together are pushing the LME forward contract into contango pointing us towards slowing demand for the metal in the coming months. Also the global economy is expected to remain subdued due to rising trade worries between US and China. If the China retaliates with more tariffs on United States we believe LME Lead prices will fall towards \$1770 per tonne in the coming three month time frame. Therefore, one can follow sell on rise strategy in LME Lead at \$2040/tonne.
