## View and Valuation

Although loan growth remains high at mid twenty, but gradually slowing down across the segment due to macro challenges. Impacted by higher cost of fund MASFIN has resorted to higher share of direct assignment but with better spreads QoQ. The margin was mainly affected as management has not been able to pass on the rise in the cost of borrowings. The stress in the MSME segment with non-availability of funds is leading to higher delinquency in the segment. Thus, tax rate cut benefit is being eroded by higher credit cost. Lower demand, increase working capital cycle, less availability of fund, risk averseness of the bank to MSME class of customer has led to stress across the sector and hence the MSME loan book segment growth is likely to remain under pressure thus impacting the asset quality of the book. We value the stock at Rs 761 at $3.3 \times$ BV FY21e and due to limited upside, we downgrade the stock to Neutral.

## Key Risks to our rating and target
