Nifty Weekly

30-Dec-19

VIEW

After taking two days of breather, Indian market resumed its uptrend. December series of Nifty was highly volatile with range of more than 500 points. Market was reeling under pressure during the early part of week followed by the downgrading of the GDP growth from RBI, Indices turned northward from the second week of series on the back of partial trade between US & China. In our previous article, we penned down about the profit booking at higher levels and undergoing some consolidation. While trading on the expected lines, indices saw a soft start and slipped into a corrective move. Global market seems to be in comfort zone on the hope of easing trade tension while indian market is expected to wait for cues from budget. All in all, though markets still have chance of achieving breakout, it iis likely to happen only if the indices move past above their recent swing high convincingly. Until this happens, we are likely to see some range bound consolidation and corrective pressure from higher levels.

Technical Outlook-

a) Appearance of dragon fly doji on weekly chart suggest decline has bought but formation of Rising wedge pattern indicate profit booking at higher levels

b) Index is facing strong trendline resistance around 12380-12420 zone and Bulls need major trigger to surpass this crucial hurdle zone

c) RSI needs to sustain above 65 mark where it will nullify its triple negative divergence and can provide further momentum on higher side

d) Formation of strong base near 11970-12000 zone showing strong support. Until this break decisively, Bulls will continue their northward journey

e) While a breakout above the zone of 12380- 12420 can push index toward 12600 levels on higher side.

Banknifty Weekly

30-Dec-19

VIEW

Banknifty has found a strong support near 31930 (our discussed support level) and thereafter gave a good pullback rally from that level. At the end of the week the index closed at 32412.35. It had a net gain of 0.1% over its previous week's close

OBSERVATIONS:

- 1) Banknifty has retested its breakout point.
- 2) RSI & Stochastic started to move in upward direction.
- 3) Banknifty is trading above 50, 100 & 200 DMAs

After retesting the breakout point, Banknifty gave a sharp pullback rally on Friday. We maintain our near term target of the index is at 33250. Therefore we recommend holding / initiating long position in Banknifty by placing stop loss at 31930 (closing basis).

USDINR Weekly

30-Dec-19

VIEW

Global currency market remained on holiday mood following by Christmas vacation in this week which lead to thin trading volume. Against our hope, Rupee depreciated while tracking the firmness in crude oil prices which hit three month high on positive US and Chinese trade development. Due to lack of global cues, we do not find much movement on either of side. However steady rise in oil, foreign fund outflow and strong US currency can push domestic currency on lower side.

TECHNICAL FACTORS-

a) Pair stands on crucial juncture where it is expected to form Head and shoulder although the formation of left shoulder is still left behind

b) The momentum oscillator RSI bounced back from oversold region but it may face resistance from its falling trendline

c) A decisive close above 71.60 followed by 72 will violate this reversal pattern and Rupee can lose weakness till 72.60 mark

d) Failure to cross and sustain above 71.60 mark can lead strength in domestic currency and it can surge higher towards 70.50 where neckline of H&S is seen.

On the daily chart, stock price has decisively broken out from its downward sloping line and sustaining above the same. On the daily and weekly chart the stocks has witnessed shift of trend to the upward forming base with congestion. The weekly strength indicator and the momentum indicator stochastic both are in positive territory which supports upside momentum to continue in near term. Stock prices is sustaining well above all its significant moving averages which supports bullish sentiment ahead.

STDC BUY CONCOR @ 575-580 AND ON DIP TOWARDS 560-555 SL- 545 (CLOSING BASIS) TGT- 630 649

On a daily chart, the stock has taken the support of its lower band of falling channel line formation in which the stock has been trading since last many days which indicate a breakout movement in the counter. Moreover, bullish crossover in MACD also suggest positive trend for the time being. On an hourly chart, the stock is on the verge to give breakout of its flag pattern which suggest a robust upside movement in the counter. Based on the above technical structure, one can take long position in the stock around 575-580 and on dip towards 560-555 with stop loss of 545 for the target of 630 and 649

STDC- BUY WIPRO @ 238-234 AND ON DIP TOWARDS 224-228 SL- 218 (CLOSING BASIS) TGT- 260 270

The stock has witnessed a decent correction recently from the peak of 300 and took a halt near line of polarity while forming double bottom pattern on daily chart. RSI turned from oversold zone and MACD has indicated a reversal to maintain a positive bias which is showing potential to rise further in the coming days. With the chart looking attractive and decent volume participation witnessed, we recommend a buy around 238-234 and on dip towards 224-228 in this stock for an upside target of 260 & 270, keep a stop loss of 218 on closing basis.

ITC has formed double top on daily scale and there after it has retraced almost 80% from there and finding support around 245. Stochastics is giving sign of reversal at current levels, volume is also supporting this setup. Hence we advice our client to accumulate ITC in the range of 250 to 244 and on decline towards 237-233 for the price targets of 264 and 274 with 218 as SL on closing basis.

Scrip is moving in a well defined ascending channel with multiple touch point and appears to be having a strong support around 138- 142 levels as it bounced back couple of time from the demand line. It also maintained its uptrend on the long term chart and is trading well above its short and long term moving averages(20/ 50 /200 DMA). The momentum oscillator, RSI is also favors the price pattern. One can accumulate the stock around 155 and lower around 138-142 zone for an upside target of 220/260 and a stop loss should maintain 125 closing basis.

COMMODITY

Commodity Price Performance and Top Picks

25/10/2019

Top Picks for 2019-2020

NICKEL

Nickel prices has risen by more than 60% on worries over supply tightness after the Indonesia announced an export ban on nickel ore from Jan 2020, two years earlier than expected. Moving into next year, Nickel prices may remain supported at Rs 1100 levels and trade higher towards 1400 levels in 2020.

GOLD

MCX Gold prices have witnessed a surge of 21% since last Diwali on account of 15-month long trade tension leads to soft economic growth, monetary easing by the central banks, increasing investment demand from ETF and Central banks buying and Brexit uncertainty. Investors started to lock in gains starting June and in the span of four months gold prices rocketed 15% and made a high \$1566/oz.

U.S. Fed policy makers will review their stance at a meeting on Oct. 29-30 amid speculation that they are set to deliver a third consecutive interest rate cut. Currently even negative interest rates and easing monetary policy is unable to spur the economic activity to balance the Debt to GDP ratio. During the short term, Gold prices may face headwind due to trade optimism and higher bond yields however, for the long term, one must mandatorily add gold in their portfolio due to uncertainty over global economic outlook. We expect Comex Gold prices to test \$1,650 in the coming year 2020.

25/10/2019

CRUDEOIL

Crude oil prices are mainly supported by the efforts of OPEC members, same way as it helped falling oil prices in 2016 by introducing production cuts. Crude oil prices managed to rise 21% YTD despite record production from US and persistent demand worries.

OPEC+ nations have planned to discuss on reducing further production in the 5th Dec 2019 policy. This meeting will be deciding factor for the future direction of oil prices.
