

Trading Calls

HAVELLS BUY 7th January 2020

Since 25th sep 2019 Havells is falling corrective and it has almost retraced 100% of the just preceding larger impulse. Around 620 it has taken multiple support and on weekly chart we can see that stochastics is giving sign of reversal. Hence we recommend buy in the range of 655 to 645 for the price targets of 687 and 705 with 613 on closing basis as stop loss.

BHEL BUY 02nd January 2020

After making a recent low of 41.30, BHEL started to give reversal from its recent downtrend. 'Positive divergences' were also witnessing in RSI and Stochastic. So some upward rally is expected in the stock in short term.

RADICO BUY 24th December 2019

The stock is in reversal phase. Some delivery based buying is witnessing in the stock. Apart from this a 'positive divergence' was formed on the RSI. Therefore some upward rally is expected in the stock in short term.

WIPRO BUY 04th December 2019

The stock has witnessed a decent correction recently from the peak of 300 and took a halt near line of polarity while forming double bottom pattern on daily chart. RSI turned from oversold zone and MACD has indicated a reversal to maintain a positive bias which is showing potential to rise further in the coming days. With the chart looking attractive and decent volume participation witnessed, we recommend a buy around 238-234 and on dip towards 224-228 in this stock for an upside target of 260 & 270, keep a stop loss of 218 on closing basis.

ITC BUY 22nd November 2019

ITC has formed double top on daily scale and there after it has retraced almost 80% from there and finding support around 245. Stochastics is giving sign of reversal at current levels, volume is also supporting this setup. Hence we advice our client to accumulate ITC in the range of 250 to 244 and on decline towards 237-233 for the price targets of 264 and 274 with 218 as SL on closing basis.

Market	Value	% Change
SGX Nifty (at 8.00 am IST)	12266.50	-0.07%

Nifty Key Levels For The Week

Support	S1: 12150	S2 : 12100
Resistance	R1 : 12250	R2 : 12300

Market Outlook

Market started on the strong foot and continued to trade with the same momentum through out the day as global market heaved a sigh of relief after easing tension between US & IRAN. Nifty reclaimed 12200 level after three days of correction. Going forward from here, the zone of 12250-12300 will act as key barrier and once these levels will be conquered then nifty will be poised for significant upmove. A minor degree dip on lower side towards the 12150-12100 zone is possible before nifty extend higher.

VIEW

Domestic market failed to capitalize gain after reaching near all time high and faced resistance at top while mirroring negative global cues after escalating tension in the middle east. Increased tension has alarmed the global market and indian indices showed ripple effect from top. Any consolidation near the previous top in Nifty can provide upward thrust with momentum although prices are sustaining near previous life time high are giving the cues for the formation of Triple top but the confirmation of the same is yet to come. We expect volatility to increase in the coming week as india VIX showed biggest one day gain of four month which suggest sentiment will remain wobbly amid concern of retaliation by IRAN. We suggest to avoid aggressive position on either side and keep protective profit with directional moves that market will take in coming sessions.

Technical Outlook-

- Formation of Bearish Harami on daily chart reveals minor correction underway but overall structure remains bullish as the sequence of higher lows on weekly chart remains intact
- Indicators are looking mixed suggest either of direction
- For the short term, the level of **12300** has become a **temporary top** for the market
- Until this break, upside momentum will remain capped and index can fell towards **12150 and 12070** levels on downside.
- Formation of strong base near **11970-12000** zone showing strong support. Until this break decisively, Bulls will continue their northward journey
- While a breakout above the level of 12300 can push index toward 12420 levels on higher side.

VIEW

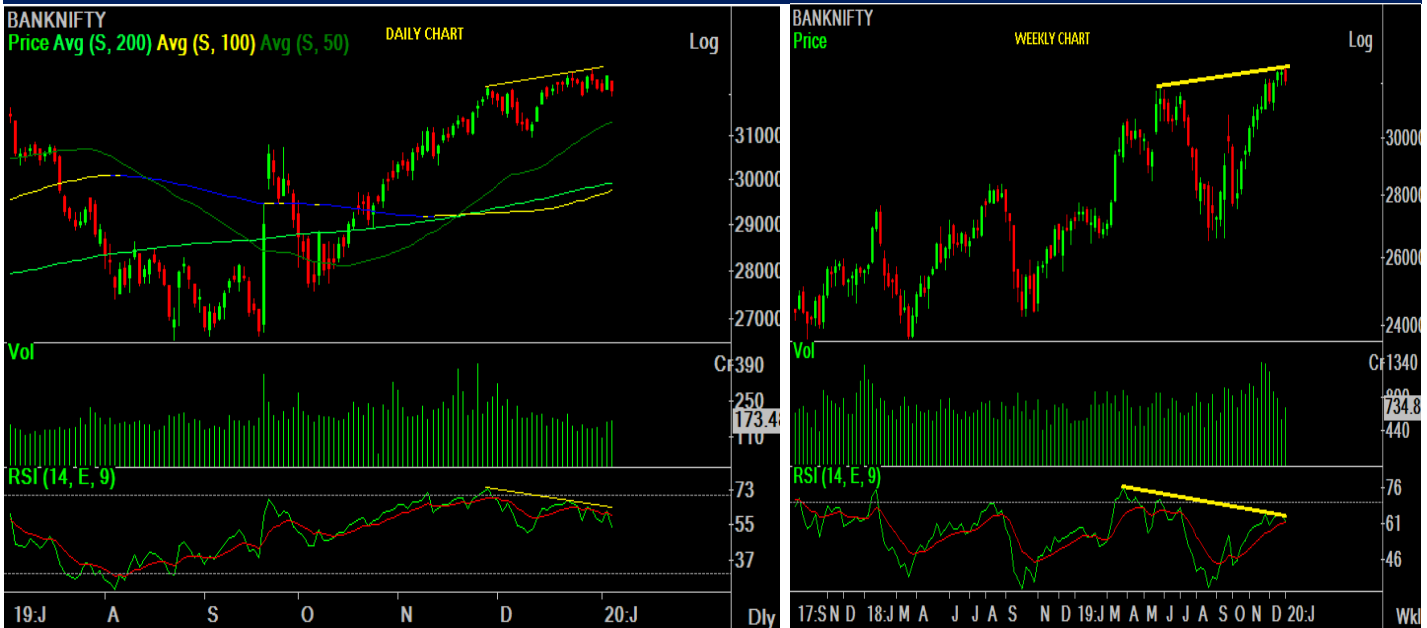

After opening with a subdued session, Banknifty fell to make a weekly low of 31960.40 on Friday and closed the week with a net loss of 1% over its previous week's close. ICI bank and Axis bank were the main catalysts to drag the index lower.

OBSERVATIONS:

- 1) Banknifty is getting a strong support near 31930 since last three successive weeks.
- 2) Negative divergence is formed in RSI both on daily and weekly chart of Banknifty.
- 3) Banknifty is trading above 50, 100 & 200 DMAs

According to the above observations it can be concluded that the the short trend of Bank nifty is definitely looking positive as the index is trading over all the major DMAs (50, 100 & 200). However it is observing that the RSI was unable to make higher high with the index both in daily and weekly charts (i.e, formation of negative divergence in both the charts). So some price / time wise correction is very likely in the extreme short term. On the lower side 31930 would act as strong support of the index and a breach of this level is likely to take the index further lower to 31500 and then 30900. Therefore we recommend holding existing long position in Banknifty by placing stop loss at 31930 (closing basis) and for initiating fresh long position, traders should adopt 'Wait and Watch' strategy until the RSI makes higher high on the chart.

CHART ANALYSIS

SUPPORT & RESISTANCE LEVELS

VIEW

Soaring oil prices on concern that middle east rising tension may hinder the oil supply which in turn effect the fiscal deficit of india and this can deteriorate the strength of Rupee in the coming days. Supply side risk remain elevated in the middle east and we could see tension continue to rise between USA & IRAN and this will create negative sentiment for indian currency.

TECHNICAL FACTORS-

- a) Against our expectation, pair may violate the formation of Head & Shoulder pattern and surge higher.
- b) A decisive close above 72 will violate this reversal pattern and Rupee can lose weakness till 72.60 mark
- c) However, pair is facing resistance from its downward falling line which can provide strength in Rupee
- d) On sustaining below 71.50, it can slip down till 71 .15 mark on downside.

Buy Price	155-161 & 138-142
Stop Loss	125
Target Price1	220
Target Price2	260
Upside in Tgt1	25%-34%
Upside in Tgt2	25%-47%

Technical Chart

STDC : BUY RECL AROUND 161-155 AND 138-142 SL 125 TARGET 220/ 260

Scrip is moving in a well defined ascending channel with multiple touch point and appears to be having a strong support around 138- 142 levels as it bounced back couple of time from the demand line. It also maintained its uptrend on the long term chart and is trading well above its short and long term moving averages(20/ 50 /200 DMA). The momentum oscillator, RSI is also favors the price pattern. One can accumulate the stock around 155 and lower around 138-142 zone for an upside target of 220/260 and a stop loss should maintain 125 closing basis.

Crude oil prices shot up by 5% in yesterday's session stood at \$63.86/bbl after the US airstrikes at the Baghdad International Airport. It killed Iran's general manager Qasem Soleimani who is the leader of Islamic Republic's elite Revolutionary Guards.

Also, the same attack killed the Iraq's Abu Mahdi Al-Muhandis, the deputy commander of the Iran-backed militias reported Reuters. This airstrikes has exacerbated the already heightened tensions in the Middle East. Tensions have been increasing between Washington and Iran after an Iran-backed Iraqi militia stormed the American embassy in Baghdad to protest deadly U.S. airstrikes earlier this week.

Iran officials have said they will give an immediate response to Washington over the attack further escalating tensions between the two countries Iran and United States. If the conflicts spread to the oilfields, we could see the shutdown of oil production in the region.

Looking at the demand supply scenario, OPEC+ nations has curtailed its oil production by another 2.1 million barrels as discussed in the previous OPEC meeting in December 2019. From starting this month, OPEC is also expected to increase their reduction in output. The global demand supply of oil is estimated to remain balanced and show a surplus of just 0.4 mbpd in the Q1 2020. However, demand prospect remains dim.

The recurring attacks on oilfields and oil producing countries are the upside risk to the oil prices. Last year, Saudi oil facilities and oil tankers were targeted by the enemies. Any attack on five big OPEC producers will be the risk to the oil prices. With rising Middle East tensions, there is a threat to the global energy exports if the Strait of Hormuz is anytime on the list. This strait is the largest and the crucial shipping route will always remain in focus when tensions like these flare up.

At present, the front month Brent-WTI spread opened at \$5.65/bbl, widest since November. Currently, the Dec 2020 future contract is trading at a backwardation of \$5.05/bbl as compared to \$4.66/bbl over previous week. It means current month prices are trading at a premium and indicates that the market is expected to remain tighter in future.

Taking above situation into consideration, if the Middle East tension rises we can see huge spike in oil prices in the months to come. With the balance demand supply and improving US-China trade relations we can expect further upside in oil prices is unavoidable. Therefore, we expect Nymex Crudeoil prices to remain supported at \$60/bbl and extend its higher move towards \$68-70/bbl in the first quarter of 2020.

Top Picks for 2019-2020

NICKEL

Nickel prices has risen by more than 60% on worries over supply tightness after the Indonesia announced an export ban on nickel ore from Jan 2020, two years earlier than expected. Moving into next year, Nickel prices may remain supported at Rs 1100 levels and trade higher towards 1400 levels in 2020.

GOLD

MCX Gold prices have witnessed a surge of 21% since last Diwali on account of 15-month long trade tension leads to soft economic growth, monetary easing by the central banks, increasing investment demand from ETF and Central banks buying and Brexit uncertainty. Investors started to lock in gains starting June and in the span of four months gold prices rocketed 15% and made a high \$1566/oz.

U.S. Fed policy makers will review their stance at a meeting on Oct. 29-30 amid speculation that they are set to deliver a third consecutive interest rate cut. Currently even negative interest rates and easing monetary policy is unable to spur the economic activity to balance the Debt to GDP ratio. During the short term, Gold prices may face headwind due to trade optimism and higher bond yields however, for the long term, one must mandatorily add gold in their portfolio due to uncertainty over global economic outlook. We expect Comex Gold prices to test \$1,650 in the coming year 2020.

CRUDEOIL

Crude oil prices are mainly supported by the efforts of OPEC members, same way as it helped falling oil prices in 2016 by introducing production cuts. Crude oil prices managed to rise 21% YTD despite record production from US and persistent demand worries.

OPEC+ nations have planned to discuss on reducing further production in the 5th Dec 2019 policy. This meeting will be deciding factor for the future direction of oil prices.
