## **Nifty Weekly**

#### 20-Jan-20

VIEW

Indices were traded on muted note and settled with mild gain after oscillating in a range but broader market was in full of action as lot of small and mid caps stocks were buzzing after struggling for last few months. Mostly sectorial indices traded in tandem with the benchmark index and ended unchanged. We are seeing rotational buying on the on the sectorial front which is helping the index to inch gradually higher. However, the main indices are seeing a mild pause in the trajectory after the solid performance of one month. We believe domestic market are expected to remain volatile with a lot more dilly- dallying next week as there will be a tint of optimism for a stellar budget of 2020 along with mixed hopes of Q3 earning results.

#### **Technical Outlook-**

a) Index started this week on positive note but despite strong attempt by Bulls, it could not cross its mentioned key resistance of 12400 level for this entire week

b) Emergence of small bull candle on weekly chart, however, apart from this no other formation of candlesticks price pattern are seen on charts

c) Index is hovering around its strong hurdle of rising trendline on the daily chart which is preventing a clean breakout on upside

d) Daily and weekly RSI stood on positive zone along with MACD which is still trading above its signal line.

e) However, daily stochastic has shown negative crossover warrant caution

f) A fall below 12275 can trigger weakness towards 12200 and 12115 levels on downside

g) In case of surge, it can face resistance near 12400 and 12500 levels.

## **Banknifty Weekly**

#### 20-Jan-20

VIEW

In line with our expectation some downward movement was witnessed in Banknifty throguout last week. This was basically the gap (that was formed in 31451- 31667 range on 9th January) filling process of the index and finaly Banknifty closed the week with a net loss of 1.6% over its previous week's close.

#### **OBSERVATIONS:**

Banknifty filled the entire gap which was formed in between 31451 and 31667 on 9th January.
A 'Golden Cross' is formed between 100 & 200 DMAs.

Banknifty has completed its gap-filling process last week. Now it is likely to rebound from the lower level. A golden cross was formed between 100 & 200 DMAs. It is also indicating of some near term upward movement of the index. Therefore we recommend initiating fresh long position in Banknifty in 31400-31500 range by placing a stop loss at 30898 (closing basis).

## **USDINR Weekly**

#### 20-Jan-20

VIEW

USDINR pair witnessed a week of consolidation on the expected lines. Rupee saw a positive opening however, it pared those gains to slip into minor negative territory. Thereafter, it spent the week in a capped range as it ended with minor loss. Pullback in crude oil prices due to IEA report which warned in its monthly report that supplies from iraq, the middle east's second biggest producer, are potentially vulnerable due to rising political risks which can become worrisome factor for rupee in the coming week while strong expectation in budget can provide support to rupee

#### **TECHNICAL FACTORS-**

a) Mild pause is seen in the strength of Rupee

b) Formation of green candle near key support suggest pullback further but reliability of this pullback is questionable

- c) As long as it sustains below 72.15-72.25 zone, bias will be positive for Rupee
- d) On sustaining below 70.50, it can slip down till 70.10 mark and 69.70 on downside.

#### BUY HAVELLS IN THE RANGE OF 655 TO 645 SL 613 TGT 687, 705

Since 25th sep 2019 Havells is falling corrective and it has almost retraced 100% of the just preceding larger impulse. Around 620 it has taken multiple support and on weekly chart we can see that stochastics is giving sign of reversal. Hence we recommend buy in the range of 655 to 645 for the price targets of 687 and 705 with 613 on closing basis as stop loss.

#### STDC- BUY WIPRO @ 238-234 AND ON DIP TOWARDS 224-228 SL- 218 (CLOSING BASIS) TGT- 260 270

The stock has witnessed a decent correction recently from the peak of 300 and took a halt near line of polarity while forming double bottom pattern on daily chart. RSI turned from oversold zone and MACD has indicated a reversal to maintain a positive bias which is showing potential to rise further in the coming days. With the chart looking attractive and decent volume participation witnessed, we recommend a buy around 238-234 and on dip towards 224-228 in this stock for an upside target of 260 & 270, keep a stop loss of 218 on closing basis.

#### **Oil Prices May Spike Further if Iran Retaliates Over US Airstrikes**

06/01/2020

Crude oil prices shot up by 5% in yesterday's session stood at \$63.86/bbl after the US airstrikes at the Baghdad International Airport. It killed Iran's general manager Qasem Soleimani who is the leader of Islamic Republic's elite Revolutionary Guards.

Also, the same attack killed the Iraq's Abu Mahdi Al-Muhandis, the deputy commander of the Iran-backed militias reported Reuters. This airstrikes has exacerbated the already heightened tensions in the Middle East. Tensions have been increasing between Washington and Iran after an Iran-backed Iraqi militia stormed the American embassy in Baghdad to protest deadly U.S. airstrikes earlier this week.

Iran officials have said they will give an immediate response to Washington over the attack further escalating tensions between the two countries Iran and United States. If the conflicts spread to the oilfields, we could see the shutdown of oil production in the region.

Looking at the demand supply scenario, OPEC+ nations has curtailed its oil production by another 2.1 million barrels as discussed in the previous OPEC meeting in December 2019. From starting this month, OPEC is also expected to increase their reduction in output. The global demand supply of oil is estimated to remain balanced and show a surplus of just 0.4 mbpd in the Q1 2020. However, demand prospect remains dim.

The recurring attacks on oilfields and oil producing countries are the upside risk to the oil prices. Last year, Saudi oil facilities and oil tankers were targeted by the enemies. Any attack on five big OPEC producers will be the risk to the oil prices. With rising Middle East tensions, there is a threat to the global energy exports if the Strait of Hormuz is anytime on the list. This strait is the largest and the crucial shipping route will always remain in focus when tensions like these flare up.

At present, the front month Brent-WTI spread opened at \$5.65/bbl, widest since November. Currently, the Dec 2020 future contract is trading at a backwardation of \$5.05/bbl as compared to \$4.66/bbl over previous week. It means current month prices are trading at a premium and indicates that the market is expected to remain tighter in future.

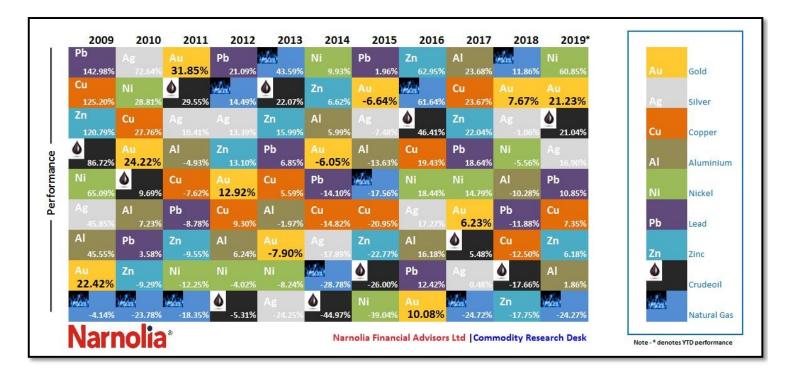

Taking above situation into consideration, if the Middle East tension rises we can see huge spike in oil prices in the months to come. With the balance demand supply and improving US-China trade relations we can expect further upside in oil prices is unavoidable. Therefore, we expect Nymex Crudeoil prices to remain supported at \$60/bbl and extend its higher move towards \$68-70/bbl in the first quarter of 2020.

#### **Top Picks for 2019-2020**

#### NICKEL

Nickel prices has risen by more than 60% on worries over supply tightness after the Indonesia announced an export ban on nickel ore from Jan 2020, two years earlier than expected. Moving into next year, Nickel prices may remain supported at Rs 1100 levels and trade higher towards 1400 levels in 2020.

#### GOLD

MCX Gold prices have witnessed a surge of 21% since last Diwali on account of 15-month long trade tension leads to soft economic growth, monetary easing by the central banks, increasing investment demand from ETF and Central banks buying and Brexit uncertainty. Investors started to lock in gains starting June and in the span of four months gold prices rocketed 15% and made a high \$1566/oz.

U.S. Fed policy makers will review their stance at a meeting on Oct. 29-30 amid speculation that they are set to deliver a third consecutive interest rate cut. Currently even negative interest rates and easing monetary policy is unable to spur the economic activity to balance the Debt to GDP ratio. During the short term, Gold prices may face headwind due to trade optimism and higher bond yields however, for the long term, one must mandatorily add gold in their portfolio due to uncertainty over global economic outlook. We expect Comex Gold prices to test \$1,650 in the coming year 2020.

#### CRUDEOIL

Crude oil prices are mainly supported by the efforts of OPEC members, same way as it helped falling oil prices in 2016 by introducing production cuts. Crude oil prices managed to rise 21% YTD despite record production from US and persistent demand worries.

OPEC+ nations have planned to discuss on reducing further production in the 5<sup>th</sup> Dec 2019 policy. This meeting will be deciding factor for the future direction of oil prices.
