TATAMOTORS BUY 03-Jul-20

Daily chart of stock reveals that demand is increasing and supply is diminishing as stock is taking support from line of parity showing rebound from its lower levels. Prices took support from the base of cup and handle price pattern suggest the possibility of pullback. Moreover, one larger degree cup and handle pattern formation is in progress which can give breakout above 119 levels which is also giving bullish tone in the stock. Stock needs to close above 109 marks for accelerating up move with ease. With the chart looking attractive and decent volume participation witnessed, we recommend a buy around 105 in this stock for an upside target of 120/130, keep a stop loss of 89 marks.

PNB BUY 03-Jul-20

This Scrip spurted from a low of 26 after forming cup and handle pattern, it showed pullback on upside marked the high of 35.50 marks and started consolidating there. Currently, it is waiting for another breakout on upside so that it can accelerate buying momentum further. Line of polarity on daily time frame of chart standing around 34 is suggesting bullish momentum in the scrip. Indicators and oscillators are also showing conducive scenario in the coming sessions. So based on the mentioned technical structure one can go long in the scrip around 36 and lower towards 32 for the target of 45/52 marks keeping a stop loss of 28.50.

AXISBANK BUY 29-Jun-20

AXIS BANK- Scrip spurted from a low of 368 after forming Hammer candlestick pattern, it showed pullback on upside marked the high of 409 marks and started consolidating there. Currently, it is waiting for the breakout on upside so that it can accelerate buying momentum further. Line of polarity on daily time frame of chart is suggesting bullish momentum in the scrip around 390-400 zone. Indicators and oscillators are also showing conducive scenario in the coming sessions. Looking at a consolidation in a range of 370-440 one can take support of lower time frame and make a bullish view; however strong movement will erupt on a close above 440. Furthermore, larger positive parameters suggests buying in Axisbank around 409 levels for higher targets of 520/600 keeping a stop loss of 335 on a closing basis.

INDUSINDBK BUY 29-Jun-20

INDUSINDBK- The stock witnessed sustained sell off over the past few days around 530-540 zone; however strong demand zone around 470-480 zone which has emerged as the support for the same. Recently it has given a breakout of major resistance line standing around 475 levels shows strength in current momentum. On daily chart, line of polarity suggest strong base and until this break decisively. Formation of flat bottom Heikin-Ashi candlestick pattern on weekly time frame indicates the consistency of positive rhythm in the stock. We expect the stock can perform going ahead and recommend buying in stock around 479 with stop loss of 403 for the target of 600/700.

Market Outlook

Market had a much buoyant and expected start to the week, as they opened gap up, became stronger during the session and ended with decent gains. Regardless of any other thing, liquidity continued to propel markets higher without showing any intent to correct. Immediate resistance is seen at 10810 above which it can extend its gain till 10880 (200 SMA) where profit booking can not be ruled out. While support lies at 10695 followed by 10630 levels.

VIEW

Domestic market pushed to four-months high due to the progress of the vaccine trial which helped offset jitter on border tension between India and China. Bulls appear to be solidifying their position as they remained in northward trajectory for the majority of the session and successfully crossed over the Wall of Worry level. At the sectorial front, FMCG, Auto & NBFC outperformed during the week while Metal & Pharma underperformed the market. India VIX expanded its losing streak and closed below 200 EMA's suggest stability in the market. We expect the market momentum to continue in the near term on the back of changed sentiment and improved liquidity.

Technical Outlook-

- After four days of consolidation, index reversed losses and reclaimed 61.8% retracement levels indicate a bullish signal
- Formation of higher peak and trough on weekly chart with improving market breadth are also adding confidence among Bulls
- Sustainability of weekly RSI and bullish crossover in MACD favouring this price action
- Contrary to this, prices are also forming rising wedge pattern on weekly chart which arises the possibility of minor hiccups
- Next resistance stands at 10750 level (100 Weekly EMA) above which it can scale higher till 10900-11000 zone
- Support levels are elevated towards the Bullish gap area of thursday's session in the range of 10485-10447 followed by 10190-10200 zone

VIEW

After opening with a subdued session, Banknifty rose to make a weekly high of 22345 and closed the week with a net gain of 1.2% over its previous week's close.

OBSERVATIONS:

1) Banknifty is consolidating in between 50 DMA & 100 DMA since 1st June 2020.

Banknifty is getting strong support at 50 DMA (currently is at 20108) and facing stiff resistance at 100 DMA (currently is at 22418) since last one month. This is indicative of the fact that the index is in the consolidation process. A sustainable move beyond 100 DMA would help the index to move in the Northward direction. However a breach of 50 DMA is likely to take the index further lower. At this juncture, we recommend to adopt a wait and watch strategy and fresh long should initiate in the index only above 100 DMA (closing basis).

VIEW

Earlier USDINR pair was heading towards the north where bulls were leading in the game and it also gave breakout above 76.15 mark after few weeks of consolidation but after arriving at key resistance level bulls could not sustain. Last week we had also changed our stance as we saw some price reversal on chart where bears were leading the game and taking the charge. Well, the current sell off is a trend reversal signal as we got a weekly close below 74.90 mark which was our major support from last few weeks and we may further selloff in this coming week also.

TECHNICAL FACTORS-

- a) This week pair opened on a weaker note and treaded in the bearish zone, remained in that zone for most part of the session
- b) On daily chart, pair has given breakdown below lower band of bollinger indicate negative bias for pair
- c) Negative crossover of 50 EMA and 20 EMA on daily chart imply selling pressure
- d) Now next support lies at 74.35-74 zone from where where we can expect pullback
- e) As long as pair sustain below lower band followed by central band of bollinger i.e. 74.90 followed by 75.70 mark, pair will continue to trade with negative biasness
