

## Trading Calls

**GLENMARK R-10 BUY 09-Jul-20**

GLENMARK- The stock is currently trading above 50, 100 & 200 DMAs. Formation of 'Golden Cross' between 100 & 200 DMAs and oversold position of Stochastic are giving indication of some immediate up move in the stock.

**AMBUJACEM R-10 BUY 09-Jul-20**

Scrip on the daily chart has witnessed an ascending triangle breakout and seems positively poised to trade higher. This week, stock has given a fresh breakout above the consolidation zone along with marginally higher volumes which indicate next up-swing in the prices. Prices have also given a breakout on the upside from the upper band with the expansion of the bollinger band indicating a continuation of the trend in the direction of breakout on the daily chart. Daly RSI is trading above 60 and the MACD line on the daily chart has given a positive crossover above equilibrium level of zero which suggests strength to this breakout. Beside this, the stock has strong support near 180-183 due to the bullish crossover of 50 and 100 SMA's. Traders can accumulate the stock in the range of 197-200 and on the dips towards 186-188 levels for the upside target of 230 and 245 levels with a stop loss below 177 on closing basis.

**TATAMOTORS BUY 03-Jul-20**

Daily chart of stock reveals that demand is increasing and supply is diminishing as stock is taking support from line of parity showing rebound from its lower levels. Prices took support from the base of cup and handle price pattern suggest the possibility of pullback. Moreover, one larger degree cup and handle pattern formation is in progress which can give breakout above 119 levels which is also giving bullish tone in the stock. Stock needs to close above 109 marks for accelerating up move with ease. With the chart looking attractive and decent volume participation witnessed, we recommend a buy around 105 in this stock for an upside target of 120/130, keep a stop loss of 89 marks.

**PNB BUY 03-Jul-20**

This Scrip spurted from a low of 26 after forming cup and handle pattern, it showed pullback on upside marked the high of 35.50 marks and started consolidating there. Currently, it is waiting for another breakout on upside so that it can accelerate buying momentum further. Line of polarity on daily time frame of chart standing around 34 is suggesting bullish momentum in the scrip. Indicators and oscillators are also showing conducive scenario in the coming sessions. So based on the mentioned technical structure one can go long in the scrip around 36 and lower towards 32 for the target of 45/52 marks keeping a stop loss of 28.50.

**AXISBANK BUY 29-Jun-20**

AXIS BANK- Scrip spurted from a low of 368 after forming Hammer candlestick pattern, it showed pullback on upside marked the high of 409 marks and started consolidating there. Currently, it is waiting for the breakout on upside so that it can accelerate buying momentum further. Line of polarity on daily time frame of chart is suggesting bullish momentum in the scrip around 390-400 zone. Indicators and oscillators are also showing conducive scenario in the coming sessions. Looking at a consolidation in a range of 370-440 one can take support of lower time frame and make a bullish view; however strong movement will erupt on a close above 440. Furthermore, larger positive parameters suggests buying in Axisbank around 409 levels for higher targets of 520/600 keeping a stop loss of 335 on a closing basis.

Resistance	R1 : 10850	R2 : 10900

## Market Outlook

!! Nifty sustaining above 200 EMA !!

Last week, Nifty's 50 DMA has crossed over 100 DMA forming a Golden Crossover pattern, which suggests prices will be bullish in mid-term and buy on dip strategy will yield better results. Sustainable move above 200 EMA for an entire week has pushed Nifty in a higher range, which is having 10500 as a lower boundary and 11000 as an upper boundary.

### VIEW

In line with our expectation, indices trotted firmly on the north side amid mixed global cues with the bulls having the upper hand, but it has been quite volatile in the last three to four sessions which indicates that the index could be waiting for a major breakout on either side. However, unlike the previous week, market witnessed a narrow range candle and follow up buying started declining but consistent fall in volatility can help bulls for retaining momentum on upside in this coming week.

### Technical Outlook-

- Considering the price behaviour of last five trading sessions, it appears that index is awaiting either a breakout or breakdown which shall usher in a swift move based on the direction of breakout
- From last five days, nifty has been trading below 200 DMA's which stands at 10885 that is the cause of concern for bulls
- Besides this, daily stochastic has already given bearish crossover and weekly stochastic is on the verge of giving red signal which imply caution at current levels
- But a bullish crossover of 50 & 100 DMA's indicates that the current uptrend of nifty has not been compromised at all.
- Fresh buying is only expected above 10885-10900 zone above which it can extend upto 11000 and 11200 levels
- While fresh short can be deployed once the reversal formation even on the daily scale would get reaffirmed on a breakdown below 10675 from where it can slip down till 10400 level on downside.

### VIEW

After opening with a subdued session, Banknifty rose to make a weekly high of 23081 on Wednesday of last week. However it was unable to maintain at the higher level and some profit booking was witnessed on the last day of the week. At last Banknifty ended the week with a net gain of 2.5% over its previous week's close.

### OBSERVATIONS:

- 1) Negative divergence is formed on Stochastic.
- 2) Banknifty is trading above 50 & 100 DMAs

In reference to the above observations it can be said that the short term trend of Banknifty is looking positive as the index is trading above 50 & 100 DMAs. However formation of negative divergence in Stochastic is giving indication of some correction (price/ time wise) from the current level. In the correction process the index may find a strong support at 100 DMA (currently is at 21985). Traders should use this correction as a buying opportunity.

### VIEW

Economic uncertainties due to spurt in coronavirus cases which raises the fear of resuming lockdown in the whole country dampened the sentiment of market participants. Globally all central banks including RBI are trying to reduce the risk and loosen the tight liquidity however the rising number of cases in our country will keep the rupee on an edge. Pair recovered its fifty percent losses of the previous week but it was also observed that the up moves are not coming with increased momentum. Though traders may continue to follow the bearish trend, it should also be kept in mind that unless the pair moves past its swing high convincingly and closes above that levels, the pair will continue to stay vulnerable at a higher level.

### TECHNICAL FACTORS-

- Pair had a positive opening and traded with the same momentum but it formed a shooting star reversal candlestick pattern on friday which signaled that the pair can resume downtrend soon.
- On weekly chart, pair formed bullish candle which has halted the downswing
- Pair is still sustaining below the negative crossover of 50 EMA and 20 EMA on daily chart suggest bearish sentiment
- Support continue to lie at 74.35-74 zone from where we can expect pullback
- Upside resistance stands at 75.70 followed by 76.15 mark

### Technical Chart

### R-10 BUY AMBUJACEM @ 197-200 AND ON DIP TOWARDS 186-188 SL- 177 (CLBS) TGT- 230 245

Scrip on the daily chart has witnessed an ascending triangle breakout and seems positively poised to trade higher. This week, stock has given a fresh breakout above the consolidation zone along with marginally higher volumes which indicate next up-swing in the prices. Prices have also given a breakout on the upside from the upper band with the expansion of the bollinger band indicating a continuation of the trend in the direction of breakout on the daily chart. Daily RSI is trading above 60 and the MACD line on the daily chart has given a positive crossover above equilibrium level of zero which suggests strength to this breakout. Beside this, the stock has strong support near 180-183 due to the bullish crossover of 50 and 100 SMA's. Traders can accumulate the stock in the range of 197-200 and on the dips towards 186-188 levels for the upside target of 230 and 245 levels with a stop loss below 177 on closing basis.
