VIEW

Domestic market has traded much on the expected line although indices were on roller coaster mode as the benchmark swung sharply on both sides but finally ended with modest gain. Progress in vaccine, conducive global cues and good earning report from wipro and Infy has helped the market to bounce back from lower levels. Near term of Nifty seems to be positive and follow thru buying can further accelerate the momentum on upside.

Technical Outlook-

- a) Index smartly recoiled in the last two days of week which depicted a Hanging man formation on weekly chart suggest a caution at higher levels
- b) But daily chart is looking impressive as prices are still sustaining above all its significant moving averages
- c) Positive set up near rising line of wedge indicating power in the hand of bulls
- d) Also momentum indicator stochastic has shown a bullish crossover which suggest positive bias in index
- e) Immediate resistance stands at 10935 above which it can extend gain up to 11035 and 11250 levels
- f) Possibility of weakness is only possible below 10560 level while intermediate support lies at 10700 levels.

VIEW

In line with our expectation some profit booking was witnessed in Banknifty last week and the index ended the week with a net loss of 1.93% over its previous week's close.

OBSERVATIONS:

Currently following things are witnessing on the daily chart of Banknifty.

- 1) Hammer pattern was formed on the daily chart of banknifty.
- 2) Banknifty is trading above 50 & 100 DMAs.
- 3) Stochastic started to move in upward direction from its oversold position.

In reference to the above observations it can be concluded that the short term trend of Banknifty is looking positive as the index is trading above 50 & 100 DMAs. At this juncture, formation of 'Hammer pattern' as well as oversold position of Stochastic are giving indication of immediate upward movement of the index. Therefore we recommend holding / initiating long position in banknifty by placing stop loss at at 20125 for the target of 23400.

VIEW

In line with our projection, Bears won the battle and retained the upper hand in USDINR pair trading. Strong rebound in equity market and foreign fund inflow helped rupee to gain strength. Persistent FX purchases by the central bank will help to adjust the volatility in the currency market. However, there still exist concerns from coronavirus and ongoing tension between US & china which will keep the market on edge. All in all, the pair may continue to trade while exhibiting a bearish bias over the coming days. The decline may not be steep and intensive but the upside, if it arises then it will remain capped.

TECHNICAL FACTORS-

- a) Little bounce back was seen in the pair which eventually fizzled out near its key resistance
- b) Emerging Head and Shoulder pattern is seen on daily chart which signal the presence of bears
- c) Construction of right shoulder below negative crossover of 20 & 50 SMA suggest downward move
- d) Prices are tagging the lower bollinger band in shorter time frame of chart and negative curve has seen in momentum indicators
- e) Technical breakdown is expected below 74.45 and pair can slip down till 73.90 and 73.45 mark
- f) A decisive close above 75.70 mark will invalidate the impact of H&S pattern
