CANBK BUY 15-Jul-20

CANBK has given a rounding bottom breakout around 100 for having targets of 120. At the same time this stock is having a strong resistance line standing around 108 levels indicating strong bullish breakout above these levels. Recent formation of cup and Handle pattern will give a breakout on a close above 108 marks which suggests buying in the stock on dip for higher targets of 135 too. Volume can also add further insight while trading these patterns. Decent volume participation while giving breakout is also giving support to C & H pattern.

TATASTEEL BUY 15-Jul-20

TATASTEEL has given a rounding bottom breakout around 336 for having targets of 400. At the same time this stock is having a strong resistance line standing around 108 levels indicating strong bullish breakout above these levels. Recent formation of cup and Handle pattern will give a breakout on a close above 355 marks which suggests buying in the stock on dip for higher targets of 395 too. Volume can also add further insight while trading these patterns. Decent volume participation while giving breakout is also giving support to C & H pattern.

LT BUY 15-Jul-20

Larsen & Toubro is trading above 900 marks with positive sentiments. This stock is trading higher after making a bottom near 875 levels in the last week. At the same time crucial support trend line is also supportive to the counter near 870-860 zone indicates higher probability of short term bottoming out scenario near 875 levels. Overall this script is running in rising wedge pattern and upper trend line is standing around 1020 marks. Relative Strength Index is trading above 50 is also adding support to positive momentum. Looking at above technical rationale, we suggest buying Larsen & Toubro around 910-919 and lower around 860-870 keeping a stop loss of 810 on closing basis for higher targets of 1020 and it can be extended to 1120 levels.

GLENMARK R-10 BUY 09-Jul-20

GLENMARK- The stock is currently trading above 50, 100 & 200 DMAs. Formation of 'Golden Cross' between 100 & 200 DMAs and oversold position of Stochastic are giving indication of some immediate up move in the stock.

AMBUJACEM R-10 BUY 09-Jul-20

Scrip on the daily chart has witnessed an ascending triangle breakout and seems positively poised to trade higher. This week, stock has given a fresh breakout above the consolidation zone along with marginally higher volumes which indicate next up-swing in the prices. Prices have also given a breakout on the upside from the upper band with the expansion of the bollinger band indicating a continuation of the trend in the direction of breakout on the daily chart. Daily RSI is trading above 60 and the MACD line on the daily chart has given a positive crossover above equilibrium level of zero which suggests strength to this breakout. Beside this, the stock has strong support near 180-183 due to the bullish crossover of 50 and 100 SMA's. Traders can accumulate the stock in the range of 197-200 and on the dips towards 186-188 levels for the upside target of 230 and 245 levels with a stop loss below 177 on closing basis.

Indices are trading near four- month high while tracking positive cues from an international market and sound quarterly results from indian companies. Domestic market has kept aside all the worries related to rising coronavirus cases and US-china face off, it has only focussed on the development of the vaccine. Last week, Bulls were looking poised in four out of the five sessions but follow-thru buying is still missing which has capped the market gain. We continue to maintain our bullish stance as long as the market will not break previous swing low. In the coming week, market will take cues from the earnings announcements of large cap companies such as Reliance, SBIN, IOC and Bharti Airtel.

Technical Outlook-

- From the last six week, index has been galloping higher and another bull candle emerged on weekly chart which means continuation of the uptrend.
- On hourly chart, nifty is forming an ascending triangle indicating momentum on upside and breakout is expected above 11240 levels.
- Sustainability of ADX and +DMI above 35 mark are showing strength in the ongoing trend
- Index has formed a higher base around 10900 levels (near 200 DMA) along with the golden crossover on daily chart
- A decisive close above 11240 can instill confidence among bulls for achieving the target of ascending triangle which comes near 11450-11500 zone
- However, a break below 10900 can induce selling pressure till 10750 level.

As per the expectation up move was witnessed in Banknifty last week and the index ended the week with a net gain of 3.2% over its previous week's close. ICICI bank was the main catalyst to lift the index higher and closed the week after gaining nearly 8%.

OBSERVATIONS:

Currently following things are witnessing on the daily chart of Banknifty.

- 1) Banknifty is trading above 50 & 100 DMAs.
- 2) Negative divergence has formed in RSI

By analysing the above observations it can be said that the short term trend of Banknifty is looking positive as the index is trading above 50 & 100 DMAs. However formation of negative divergence in RSI is giving indication of some correction (price wise/ time wise) from the current level. In the correction process 22100 and 21200 would act as near-term strong supports of Banknifty. Traders should use this correction process as a fresh buying opportunity.

Pair is still bearish despite the ranging market conditions. Dips are being bought but the prices are mostly sideways. Weakened sentiment in Dollar index and expansion in Indian forex reserves helped the Rupee in gaining strength for the last two weeks. However, rising US-China tension and Covid-19 cases in India are major concerns for the Indian currency which has capped the gain. In the coming week, schedule currency expiry of the July month contract would keep the volatility high. Despite this, global cues and updates related to the Covid-19 will also be on the participants' radar.

TECHNICAL FACTORS-

- Pair narrowed its trading range as it oscillated in a very limited range throughout the week to end with a minor loss
- Bearish Head and Shoulder has completed its pattern on the daily chart and is awaiting for the breakdown
- Prices are still trading below the negative crossover of 20 & 50 SMA, suggesting a downward move
- DMI is also trading above +DMI with rising ADX, indicating a weak trend
- Technical breakdown is expected below 74.45, and the pair can slip down to 73.90 and 73.45 mark
- A decisive close above 75.70 mark will invalidate the impact of H&S pattern

A Cup & Handle reversal pattern forms after a down trend, and its completion marks a trend reversal to up trend. C & H patterns are an integral part of technical analysis, but successful traders combine these techniques with technical indicators and other forms of technical analysis to maximize their odds of success. In the standard Cup & Handle pattern, we connect the high after Cup with the high created after the handle. A trend line is drawn by connecting these highest points of the two peaks, which is called as "Neckline". This trend line is the most important component of C & H pattern. CANNK has given a rounding bottom breakout around 100 for having targets of 120. At the same time this stock is having a strong resistance line standing around 108 levels indicating strong bullish breakout above these levels. Recent formation of cup and Handle pattern will give a breakout on a close above 108 marks which suggests buying in the stock on dip for higher targets of 135 too. Volume can also add further insight while trading these patterns. Decent volume participation while giving breakout is also giving support to C & H pattern.

ITC is trading in a rising wedge every since it made a bottom near 134 levels and upper trend line comes near 220 marks. Recently it has given golden crossover and as per the setup prices should move up towards higher pivot points in short-term and mid-term as well. At the same time prices has given trend line breakout on the upside with the expansion of bands on daily chart suggesting a continuation of trend in the direction of breakout. MACD has given bullish crossover and about to move above equilibrium level of zero on daily chart. It has been in a steady uptrend in last few days with higher trough and crests as well. Positive crossover of 20 and 50 dma's suggest firm support on dips. Looking at above rationale traders can accumulate this stock for higher levels.

Technical Chart

STDC BUY BANK OF BARODA AROUND 51.50-50.50 & 44-45 SL 40.50(CLOSING) TARGET 64/74

Gann's wheels and Squares are some of the most common applications and form the cornerstone of Gann's work. Gann emphasizes on natural squares acting as a support and resistance in stock prices. In case of Bank of Baroda surprisingly recent swing low is 36 which is exact square of 6 and thereafter it is trading higher by taking support. Not only it has taken support but also it is trading above 49 levels which is (6+1) square as its current market price is 50. Understanding above rationale we can make a buying decision in the stock for higher levels. As per one of the method of Gann suggests 'even to even' cycle of the stock and as per this method, stock has made a bottom of 36 which is square of 6; hence immediate cycle on upside can go (6+2) square which comes to 64. So one can consider profit booking near 64 levels. Gann gave importance to crucial ratio of 5/8 or 62.5 in all of his trading methods. Keeping it mind we have calculated 5/8 levels of entire rise, which comes to 40.60. Entire bullish view negates on a breach of 5/8 levels and in case of BANKBARODA, we will consider 40.60 as a stop loss level. We recommend buying Bank of Baroda (BANKBARODA) around 51.50-50.50 & 44-45 SL 40.50(CLOSING) TARGET 64/74.

Daily chart of stock reveals that demand is increasing and supply is diminishing as stock is taking support from line of parity showing rebound from its lower levels. Prices took support from the base of cup and handle price pattern suggest the possibility of pullback. Moreover, one larger degree cup and handle pattern formation is in progress which can give breakout above 119 levels which is also giving bullish tone in the stock. Stock needs to close above 109 marks for accelerating up move with ease. With the chart looking attractive and decent volume participation witnessed, we recommend a buy around 105 in this stock for an upside target of 120/130, keep a stop loss of 89 marks.

STDC BUY AXISBANK AROUND 409-405 AND 375-379 SL 335(CLOSING) TARGET 520/600

AXIS BANK- Scrip spurted from a low of 368 after forming Hammer candlestick pattern, it showed pullback on upside marked the high of 409 marks and started consolidating there. Currently, it is waiting for the breakout on upside so that it can accelerate buying momentum further. Line of polarity on daily time frame of chart is suggesting bullish momentum in the scrip around 390-400 zone. Indicators and oscillators are also showing conducive scenario in the coming sessions. Looking at a consolidation in a range of 370-440 one can take support of lower time frame and make a bullish view; however strong movement will erupt on a close above 440. Furthermore, larger positive parameters suggests buying in Axisbank around 409 levels for higher targets of 520/600 keeping a stop loss of 335 on a closing basis.
