

Trading Calls

CENTURYTEX BUY 07-Aug-20

The stock has given a bullish breakout above 320. A golden cross has also formed in between 50 & 100 DMAs. So some short term up move is very likely in the stock. Therefore we recommend initiating fresh long position in the stock for the target price of 356 and then 400.

JUSTDIAL BUY 06-Aug-20

On 26th March 2020 it has completed an internal wave 'c' at 250 and fresh impulsive wave started from this point. On the above mentioned chart we have mentioned the impulsive wave labeling of 1, 2, 3, 4 and also projected wave 5 with targets (time and price wise both). Volume distribution setup is also supporting this structure. At wave 4 it has formed a Double Bottom setup which is bullish sign. Hence we advise our client to buy JUSTDIAL in two tranches. First 50% between 192-188 and rest 50% can be bought on decline towards 174-170 with 151 as stop on closing basis for the targets of 418 and 444.

HINDALCO R-10 BUY 29-Jul-20

Stock is trading with strong uptrend and rallied from 85 to 170 without any meaningful correction in four months. Since the last few days, the stock has been going through time correction and has formed a falling channel on the daily chart. Prices have given breakout from the falling channel with the formation of Bull candle showing strength on upside. Daily 14 period RSI is placed above 60 levels and is gradually turning up signaling strength in the upside momentum. In addition, stochastic witnessed a bullish crossover which suggests that bull can continue to gain momentum on the north side. Hence, looking at the current structure we recommend buying in the stock around 163-166 and on a dip towards 154-157 with a stop loss of 143 on closing basis for the target of 184 and 192 levels.

CANBK BUY 15-Jul-20

CANBK has given a rounding bottom breakout around 100 for having targets of 120. At the same time this stock is having a strong resistance line standing around 108 levels indicating strong bullish breakout above these levels. Recent formation of cup and Handle pattern will give a breakout on a close above 108 marks which suggests buying in the stock on dip for higher targets of 135 too. Volume can also add further insight while trading these patterns. Decent volume participation while giving breakout is also giving support to C & H pattern.

LT BUY 15-Jul-20

Larsen & Toubro is trading above 900 marks with positive sentiments. This stock is trading higher after making a bottom near 875 levels in the last week. At the same time crucial support trend line is also supportive to the counter near 870-860 zone indicates higher probability of short term bottoming out scenario near 875 levels. Overall this script is running in rising wedge pattern and upper trend line is standing around 1020 marks. Relative Strength Index is trading above 50 is also adding support to positive momentum. Looking at above technical rationale, we suggest buying Larsen & Toubro around 910-919 and lower around 860-870 keeping a stop loss of 810 on closing basis for higher targets of 1020 and it can be extended to 1120 levels.

Market	Value	% Change
SGX Nifty (at 8.30 am IST)	11367.00	0.40%

Nifty Key Levels For The Week

Support	S1: 11150	S2: 11125
Resistance	R1: 11350	R2: 11450

Market Outlook

Once again nifty witnessed profit booking after reaching near its swing high. Index has been forming indecisive candle from last four days in a row suggesting a sudden sell off. But a gradual decline in VIX from its recent bounce suggest bulls are using every decline as a buying opportunity and the overall trend could remain bullish for a potential range breakout. A decisive close above 11350 can instill confidence among bulls for the next leg of move towards 11450-11500 zone. Support move up to 11200 followed by 11125 mark.

VIEW

Previous week turned out much on the anticipated lines as the indices recouped their losses after showing minor corrections and ended the week with modest gain. We mentioned in our previous week outlook, "**But bulls can give tough fight around 11000 and 10900 levels (near 200 DMA) along with the golden crossover on daily chart**", that has played out as envisaged. Accommodative stance of the RBI boosted the sentiment of market participants and helped the domestic market to regain its lost strength. We expect the rally on D-street to continue going ahead on hopes of more liquidity, expectations of additional stimulus packages from the government and a recovery in the rural economy on account of favourable monsoon.

Technical Outlook-

- Index has got stuck in a range where dips are being bought but supply pressure was clearly visible at higher levels.
- But finally the index managed to hold above 11200 level on a weekly close which is a positive sign for the market.
- Volatility index has been hovering below 25 levels from the last thrice weeks which hints at no major movement in the short term
- For the expansion of up move nifty has to give decisive close above 11400 from where it can extend up to 11500 and 11685 levels
- One should keep a close eye on 11000 and 10880 (near 200 DMA) as its breakdown will trigger a decline toward 10750 level, else consolidation will continue.

CHART ANALYSIS

Resistance 2	11500	TGT of Ascending triangle
Resistance 1	11400	78.6% FIBONACCI RETRACEMENT
Close	11214	
Support 1	10880	Near 200 DMA
Support 2	10750	Previous Swing low

VIEW

Banknifty gave a range bound and choppy movement throughout last week and closed the week with a net gain of 0.5% over its previous week's close.

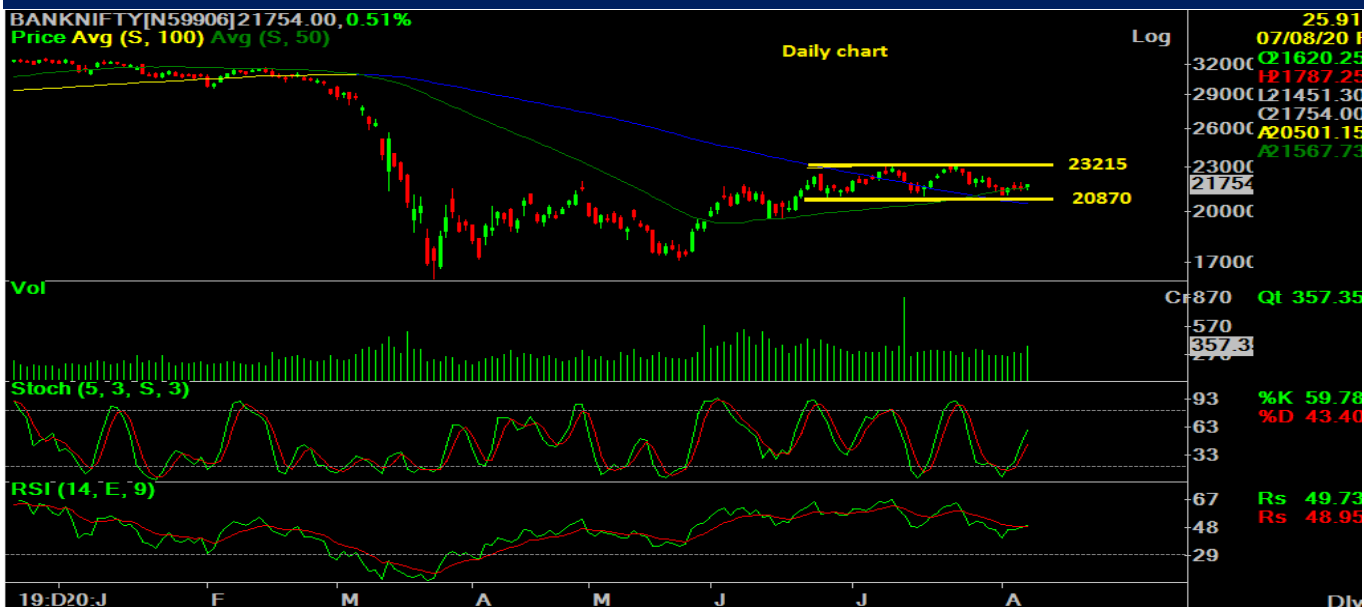

OBSERVATIONS:

Currently following things are witnessing on the daily chart of Banknifty.

- 1) The index is trading in (20870-23215) channel since last two months.
- 2) It is consolidating near 50 & 100 DMAs.

By analysing the above observations it can be said that trading is prudent decision in Banknifty as long as it trades in a particular channel. Currently the index is trading near the lower band of (20870-23215) channel. Apart from this it is also moving around its near-term support areas (50 & 100 DMAs). So traders should initiate fresh long position in the index by placing stop loss at 20870 (closing basis).

CHART ANALYSIS

SUPPORT & RESISTANCE LEVELS

RESISTANCE/SUPPORT	BANKNIFTY LEVEL
Resistance 2	23215
Resistance 1	22350
Close	21754
Support 1	20200
Support 2	20870

VIEW

From the last few weeks pair has refused to move out of the area pattern and displayed a positive move against our expectation. Technical structure is still looking weak but at any how pair defended its downside move due to strengthening of US dollar which has weighed upon the indian currency. Despite ending on a positive note, pair continue to remain in a precarious position on the daily chart. Unless pair moves past above previous swing high, it remains vulnerable within the current area formation .In the event of any up moves, if any , it is strongly recommended to stay away from chasing moves on the higher side.

TECHNICAL FACTORS-

- a) Pair has been witnessing bouts of volatility from its support and resistance area.
- b) Clusters of medium term moving averages also acted a major resistance zone
- c) Sustainability below falling trendline indicate downside move
- d) Momentum indicator RSI is also facing resistance at 50 mark.
- e) If pair closes below 74.45 then it will confirm the weakness, thereby triggering a fresh leg of downswing towards 74 and 73.50 mark.
- f) A decisive close above 75.70 mark will invalidate the impact of bearish setup.

STDC BUY CANBANK AROUND 102-101 AND 95-94 SL 87 (CLOSING) TARGET 124/134

A Cup & Handle reversal pattern forms after a down trend, and its completion marks a trend reversal to up trend. C & H patterns are an integral part of technical analysis, but successful traders combine these techniques with technical indicators and other forms of technical analysis to maximize their odds of success. In the standard Cup & Handle pattern, we connect the high after Cup with the high created after the handle. A trend line is drawn by connecting these highest points of the two peaks, which is called as "Neckline". This trend line is the most important component of C & H pattern. CANNK has given a rounding bottom breakout around 100 for having targets of 120. At the same time this stock is having a strong resistance line standing around 108 levels indicating strong bullish breakout above these levels. Recent formation of cup and Handle pattern will give a breakout on a close above 108 marks which suggests buying in the stock on dip for higher targets of 135 too. Volume can also add further insight while trading these patterns. Decent volume participation while giving breakout is also giving support to C & H pattern.

Technical Chart

STDC BUY ITC AROUND 197-194 AND 173-176 SL 161 TARGET 220/232

ITC is trading in a rising wedge every since it made a bottom near 134 levels and upper trend line comes near 220 marks. Recently it has given golden crossover and as per the setup prices should move up towards higher pivot points in short-term and mid-term as well. At the same time prices has given trend line breakout on the upside with the expansion of bands on daily chart suggesting a continuation of trend in the direction of breakout. MACD has given bullish crossover and about to move above equilibrium level of zero on daily chart. It has been in a steady uptrend in last few days with higher trough and crests as well. Positive crossover of 20 and 50 dma's suggest firm support on dips. Looking at above raionale traders can accumulate this stock for higher levels.

Buy Price	50.50-51.50&44-45
Stop Loss	40.5
Target Price1	64
Target Price2	74
Upside in Tgt1	26.00%
Upside in Tgt2	48.00%

Technical Chart

STDC BUY BANK OF BARODA AROUND 51.50-50.50 & 44-45 SL 40.50(CLOSING) TARGET 64/74

Gann's wheels and Squares are some of the most common applications and form the cornerstone of Gann's work. Gann emphasizes on natural squares acting as a support and resistance in stock prices. In case of Bank of Baroda surprisingly recent swing low is 36 which is exact square of 6 and thereafter it is trading higher by taking support. Not only it has taken support but also it is trading above 49 levels which is (6+1) square as its current market price is 50. Understanding above rationale we can make a buying decision in the stock for higher levels. As per one of the method of Gann suggests 'even to even' cycle of the stock and as per this method, stock has made a bottom of 36 which is square of 6; hence immediate cycle on upside can go (6+2) square which comes to 64. So one can consider profit booking near 64 levels. Gann gave importance to crucial ratio of 5/8 or 62.5 in all of his trading methods. Keeping it mind we have calculated 5/8 levels of entire rise, which comes to 40.60. Entire bullish view negates on a breach of 5/8 levels and in case of BANKBARODA, we will consider 40.60 as a stop loss level. We recommend buying Bank of Baroda (BANKBARODA) around 51.50-50.50 & 44-45 SL 40.50(CLOSING) TARGET 64/74.

Upside in Tgt1	25.00%
Upside in Tgt2	44.00%

STDC BUY PNB AROUND 36-35.50 AND 32-31.50 SL 28.50 (CLOSING) TARGET 45/52

This Scrip spurred from a low of 26 after forming cup and handle pattern, it showed pullback on upside marked the high of 35.50 marks and started consolidating there. Currently, it is waiting for another breakout on upside so that it can accelerate buying momentum further. Line of polarity on daily time frame of chart standing around 34 is suggesting bullish momentum in the scrip. Indicators and oscillators are also showing conducive scenario in the coming sessions. So based on the mentioned technical structure one can go long in the scrip around 36 and lower towards 32 for the target of 45/52 marks keeping a stop loss of 28.50.
