

Trading Calls

GODREJAGRO-R10 BUY 14-Sep-20

The stock has broken out of a falling channel line resistance and started trading above its major medium term moving averages. The short term moving averages in the weekly time frame has developed a positive curve indicating the initial sign of trend reversal buying. The weekly RSI has started trading in a bullish zone suggests that momentum is building up in the stock and the short term rally might not be ruled out. On the daily chart, the lower top and lower bottom cycle has reversed indicating the worst is over and bulls are likely to take the charge again. The average directional index (ADX) is trading with a positive slope suggesting the trending move in the stock. Traders can initiate buying positions at 500-505 and on any dip till 480-485 for the gain of 570 and 590 with stop loss of 460 on closing basis.

SBIN BUY 09-Sep-20

In last some days, SBI is trading lower and halted its downward journey near slanting trend line of rising channel. This stock is currently trading in classical rising channel pattern and as per this pattern base line acts as a strong support. At the same time line of parity is also standing around 190 marks, signifies support near 190-195 zones. Demand zone and strong support can be utilized for bargain hunting buying opportunity. Looking at above mentioned rationale, we suggest buying SBI around 195 and lower around 185 for higher targets of 220 /230 levels.

AXISBANK BUY 09-Sep-20

AXIS BANK- Axisbank is typically trading in rising channel and currently trading near lower trend line of the channel. Stock is correcting after making a high of 530 marks. Strong supports provided by line of polarity and slanting trend line are conducive as base formation. Indicators and oscillators are also showing conducive scenario in the coming sessions as they are giving up tick in over sold zone. Looking at a consolidation in a range of 430-490 one can take support of lower time frame and make a bullish view; however strong movement will erupt on a close above 450 where it's 20 DMA is standing. Furthermore, we suggest buying in Axisbank around 430 levels for higher targets of 470/490 keeping a stop loss of 400 on a closing basis.

INDUSINKBK BUY 07-Sep-20

The stock witnessed sustained sell off over the past few days around 650-660 zone; however strong demand zone around 580-590 zone which has emerged as the support for the same. Recently it has taken support from white trend line as indicated on charts standing around 592 levels shows strength in current momentum. On daily chart, line of polarity suggest strong base and until this break decisively. Formation of flat bottom Heikin-Ashi candlestick pattern on daily time frame indicates the consistency of positive rhythm in the stock. We expect the stock can perform going ahead and recommend buying in stock around 610 & 575 with stop loss of 540 for the target of 680/720.

BODALCHEM-R10 BUY 04-Sep-20

BODALCHEM- Short term trend of the stock is looking positive as it is trading above all the major DMAs (100 & 200). A 'Positive divergence' on Stochastic was also formed on the daily chart. So some immediate up move is very likely from the current level.

Market	Value	% Change
SGX Nifty (at 8.30 am IST)	11494.00	-0.35%

Nifty Key Levels For The Week

Support	S1: 11400	S2 : 11350
Resistance	R1 : 11550	R2 : 11600

Market Outlook

Nifty tried their best to recoup its previous day losses and negated the impact of bearish reversal pattern which suggest that bulls were in no mood to cede further ground. It require a decisive follow up move above 11550 followed by 11680 to confirm the momentum on upside. While on the downside support is shifted higher towards 11440 (20 SMA) followed by 11325 level.

VIEW

Nifty recovered its losses and managed to close above 20 DMA in the previous week however the Banking index closed in red. Market took support from line of parity standing around 11200 marks and traded higher by giving closing above 5 DMA signaling short term bias will continue to be positive.

Benchmark index has continued to trade above 100 week SMA and we have seen a 20 week SMA crossing over 200 week SMA which is a bullish sign in mid-term. At the same time Monthly and daily Heikin-Aashi candles are having bullish formations which imply short term and long term bullish price action is still intact.

Recently, the Index has formed an Inverse head and shoulder pattern on a lower time frame which is bullish in nature. Targets of the pattern are 11700 on the higher side till it is trading above 11300 marks. Moving further, 11200 will act as a crucial support and base whereby any decisive close below these levels will lead to a trend reversal action, till then one can opt for buy on dip strategy for higher levels of 11700.

CHART ANALYSIS

Support 2	11000	

VIEW

In line with our expectation some selling was witnessed in Banknifty last week and the index closed with a net loss of 2.3% than its previous week's close. Kotak bank was the main catalyst to drag the index lower and it closed the week with a net loss 3.6%.

By analysing the daily chart of Banknifty it can be said that the index is currently approaching towards its near-term support of 100 DMA (21261). Currently Stochastic has reached at the oversold position. So some pullback may possible in the extreme short term. Therefore we recommend holding/ initiating long position in Banknifty by placing stop loss at 100 DMA. On the higher 23200-23500 would act as near-term resistance of the index.

CHART ANALYSIS

SUPPORT & RESISTANCE LEVELS

RESISTANCE/SUPPORT	BANKNIFTY LEVEL
Resistance 2	23500
Resistance 1	23200
Close	22479
Support 1	22220
Support 2	21260

VIEW

The USDINR rebounded after hitting a six month low earlier this month, closing for the week at 73.43. Foreign flows have been strong both from the Equity and the Bond markets. That along with measures from the RBI have kept the domestic currency strong against the greenback. We continue to maintain a bearish view on USDINR and expect it to behave in line with most emerging market currencies that have appreciated against the US Dollar this month. We expect that RBI to do more rate cuts over the next few months due to larger than expected contraction in GDP.

TECHNICAL FACTORS-

- a) Pair continues to be in a downtrend as structures have been broken and momentum has been established in multiple time-frames
- b) The week saw the pair bouncing sharply from the established support zones between the 73.15-72.95 zones.
- c) The Rise though was capped at the upper end in the 74.05-73.90 zones, which also has confluence of the downward sloping trenline.
- d) A breach on either side of the respective zones on a closing basis would further establish the trend, though we are biased on the downside as higher time-frames charts too have turned negative.

Buy Price	805
Stop Loss	769
Target Price1	888
Target Price2	925
Upside in Tgt1	10.31%
Upside in Tgt2	14.91%

Technical Chart

STDC: BUY AUROPHARMA BETWEEN 825-815 & DECLINE 795-785, 769(CLOSING BASIS) TGT 888, 925

On the daily chart, you will see that the AUROPHARMA has completed a long term correction on 23rd March 2020. Since 23 March 2020, it has been rising in Impulse, which we have shown in the above chart with Elliott wave labeling. After completing Wave 3 on 10 August 2020 at 967.50, it has completed wave 4 on 1st September. Our expectation for wave 5 is that it can go up to 925 or even above it. You are advised to maintain 769 as stop loss on closing basis for the target of wave 5. If we connect the low of 28th July and 1st September, we will find that it has made a double bottom on the daily chart, which is also a bullish sign. Hence we recommend buy between 825-815 and on decline towards 795-785 for the price targets of 888 and 925 with 769 on closing basis as stop loss.

STDC : Long / BUY

28-Aug-20

Upside in Tgt2	25.00%

STDC : BUY KOTAKBANK @ 1440-1420 AND DIP TOWARDS 1380-1360 SL-1265 TGT- 1560 1620

On daily chart, the stock has taken the support of the rising trend line and 20, 50, 100 & 200 days SMA. Stock also gave breakout from its consolidation zone on daily chart along with the ascending triangle pattern breakout of the medium bull trend on chart indicating a pullback on upside. Formation of bullish engulfing on weekly chart also indicates a positive move. The momentum indicators and oscillators are very well in the buy mode on a weekly scale which hints that bulls are still having an upper hand. Based on the above technical structure, one can take a long position in the stock around 1420-1440 and on a dip towards 1380-1360 with a stop loss of 1265 on closing basis for the target of 1560 and 1620.

R-10 : Long / BUY

24-Aug-20

BSE Code	532454

Technical Chart

R-10: BUY GODREJCP @ 680-687 AND ON DIP TOWARDS 661-667 SL-618 TGT-780 810

Short term correction seems to be over in the stock and bulls are likely to take the charge again. The bullish candlestick pattern on August 24, 2020 near 50 and 20 days moving average suggests that bulls have entered in a counter at consolidation levels. Further, the falling trend line breakout on Friday's trading session with decent volume is providing an additional signal that short term rally might not be ruled out in the coming days. The short term moving averages ribbon is developing a bullish curve after a recent correction and prices are trading above all its major short term and medium-term moving averages. Traders can initiate long positions at 680-687 and on any dip till 661-667 for a gain of 780 and 810 with stop loss of 618 on closing basis.

Technical Chart

R-10 BUY ONGC AROUND 81-80 AND 72.50-71.50 SL 69(CLOSING) TARGET 92/97

ONGC corrected heavily and formed bottom near 50 marks few weeks back. The stock has formed specific harmonic pattern ABCD and its D point concludes near 50. As per the post pattern implication of this pattern this script should retrace towards higher levels. As we put Fibonacci retracement with one point lower to 'C', 50% retracement levels come near 100. At the same time previous swing bottom comes near 110 marks, which also supportive for prices. Furthermore, momentum oscillators are conducive for prices too. Looking at above mentioned rationale, we suggest buying to buy ONGC around 80 for targets of 50% retracement mark standing around 100.

Stop Loss	272
Target Price1	365
Target Price2	385
Upside in Tgt1	16.00%
Upside in Tgt2	22.00%

STDC BUY BANDHANBNK AROUND 316-313 AND 290-293 SL 272 TARGET 365/385

Bandhan Bank is trading above crucial support standing around 275 marks with positive sentiments. This stock is trading higher after making a bottom near 200 levels in the last month. At the same time crucial support trend line is also supportive to the counter near 270-280 zone indicates higher probability of short term bottoming out scenario near 280 levels. Overall this script is running in rising channel pattern and upper trend line is standing around 385 marks. Relative Strength Index is trading above 50 is also adding support to positive momentum. Looking at above technical rationale, we suggest buying Bandhan Bank around 313-316 and lower around 290-293 keeping a stop loss of 272 on closing basis for higher targets of 365 and it can be extended to 385 levels.

Upside in Tgt2	31.00%

Technical Chart

STDC BUY CANBANK AROUND 102-101 AND 95-94 SL 87 (CLOSING) TARGET 124/134

A Cup & Handle reversal pattern forms after a down trend, and its completion marks a trend reversal to up trend. C & H patterns are an integral part of technical analysis, but successful traders combine these techniques with technical indicators and other forms of technical analysis to maximize their odds of success. In the standard Cup & Handle pattern, we connect the high after Cup with the high created after the handle. A trend line is drawn by connecting these highest points of the two peaks, which is called as "Neckline". This trend line is the most important component of C & H pattern. CANNK has given a rounding bottom breakout around 100 for having targets of 120. At the same time the stock is having a strong resistance line standing around 108 levels indicating strong bullish breakout above these levels. Recent formation of cup and Handle pattern will give a breakout on a close above 108 marks which suggests buying in the stock on dip for higher targets of 135 too. Volume can also add further insight while trading these patterns. Decent volume participation while giving breakout is also giving support to C & H pattern.

Target Price2	232
Upside in Tgt1	11.00%
Upside in Tgt2	18.00%

Technical Chart

STDC BUY ITC AROUND 197-194 AND 173-176 SL 161 TARGET 220/232

ITC is trading in a rising wedge every since it made a bottom near 134 levels and upper trend line comes near 220 marks. Recently it has given golden crossover and as per the setup prices should move up towards higher pivot points in short-term and mid-term as well. At the same time prices has given trend line breakout on the upside with the expansion of bands on daily chart suggesting a continuation of trend in the direction of breakout. MACD has given bullish crossover and about to move above equilibrium level of zero on daily chart. It has been in a steady uptrend in last few days with higher trough and crests as well. Positive crossover of 20 and 50 dma's suggest firm support on dips. Looking at above rationale traders can accumulate this stock for higher levels.

6-Jul-20

BSE Code	532134
NSE Symbol	BANKBARODA
52wk Range H/L	36/114
Mkt Capital (Rs Cr)	5604
Av.Cash Volume(00000)	1200

Buy Price	50.50-51.50&44-45
Stop Loss	40.5
Target Price1	64
Target Price2	74
Upside in Tgt1	26.00%
Upside in Tgt2	48.00%

STDC BUY BANK OF BARODA AROUND 51.50-50.50 & 44-45 SL 40.50(CLOSING) TARGET 64/74

Gann's wheels and Squares are some of the most common applications and form the cornerstone of Gann's work. Gann emphasizes on natural squares acting as a support and resistance in stock prices. In case of Bank of Baroda surprisingly recent swing low is 36 which is exact square of 6 and thereafter it is trading higher by taking support. Not only it has taken support but also it is trading above 49 levels which is (6+1) square as its current market price is 50. Understanding above rationale we can make a buying decision in the stock for higher levels. As per one of the method of Gann suggests 'even to even' cycle of the stock and as per this method, stock has made a bottom of 36 which is square of 6; hence immediate cycle on upside can go (6+2) square which comes to 64. So one can consider profit booking near 64 levels. Gann gave importance to crucial ratio of 5/8 or 62.5 in all of his trading methods. Keeping it mind we have calculated 5/8 levels of entire rise, which comes to 40.60. Entire bullish view negates on a breach of 5/8 levels and in case of BANKBARODA, we will consider 40.60 as a stop loss level. We recommend buying Bank of Baroda (BANKBARODA) around 51.50-50.50 & 44-45 SL 40.50(CLOSING) TARGET 64/74.

Buy Price	35.50-36 & 31.50-32
Stop Loss	28.5
Target Price1	45
Target Price2	52
Upside in Tgt1	25.00%
Upside in Tgt2	44.00%

STDC BUY PNB AROUND 36-35.50 AND 32-31.50 SL 28.50 (CLOSING) TARGET 45/52

This Scrip spurted from a low of 26 after forming cup and handle pattern, it showed pullback on upside marked the high of 35.50 marks and started consolidating there. Currently, it is waiting for another breakout on upside so that it can accelerate buying momentum further. Line of polarity on daily time frame of chart standing around 34 is suggesting bullish momentum in the scrip. Indicators and oscillators are also showing conducive scenario in the coming sessions. So based on the mentioned technical structure one can go long in the scrip around 36 and lower towards 32 for the target of 45/52 marks keeping a stop loss of 28.50.
