During the week the Nifty continued to remain in the channel projected since last few weeks. It is now seven weeks that Nifty has been within this channel. With passage of time the range of this channel is increasing and the upper and lower levels of the channel are becoming more and more important. The range of the channel for the next week is 9775 to 9525 and we can safely assume that these levels will hold. So any move towards 9525 and same being held is an opportunity to buy. A move towards 9775 and a weakness at that level can be sold into.

On the daily charts the real bodies of candlesticks have become smaller indicating loss of momentum on the upside. On Friday, there was a gap up but with less than average volume. The bottom of the gap is 9634.50. This level should be carefully watched. Daily close below this level within a few days will indicate that this was a exhaustion gap and correction is in the offing.
